**AI 2019: Advances in Artificial Intelligence** Jixue Liu, James Bailey, 2019-11-25 This book constitutes the proceedings of the 32nd Australasian Joint Conference on Artificial Intelligence AI 2019 held in Adelaide SA Australia in December 2019. The 48 full papers presented in this volume were carefully reviewed and selected from 115 submissions. The papers were organized in topical sections named game and multiagent systems, knowledge acquisition, representation, reasoning, machine learning and applications, natural language processing and text analytics, optimization and evolutionary computing, and image processing.

*A Narrative History of Artificial Intelligence* Masayuki Ida, 2024-05-02 This book addresses the history of artificial intelligence through the author's experiences from the 1960s when AI was a dream to give computers far more power than the progress for industrial technological advancement. The book starts from the AI pioneering days including what the author witnessed and impressed, then the episodes during AI boom of the 80s and 90s when the author was involved in ANSI X3J13 committee work as a principal member translating Common Lisp books into Japanese, leading committee works in Japan for global standardization and visiting MIT AI Lab for totally three years. The book points out that neural network research started in the 1980s, highlighting the DARPA report dated in 1988. The last episodes and thoughts include the experiences with business school students after the author moved from engineering school. The former half is from a view of an engineering mind, and then the latter is based on how the author struggled with business-minded people to explain the core of AI. This book is suitable for anyone interested in the history of Artificial Intelligence. The content is easy to follow, even for readers without prior knowledge of AI. Experts will also find something new and thought-provoking.

*Computational Methods for Corpus Annotation and Analysis* Xiaofei Lu, 2014-07-08 In the past few decades, the use of increasingly large text corpora has grown rapidly in language and linguistics research. This was enabled by remarkable strides in natural language processing (NLP) technology, technology that enables computers to automatically and efficiently process, annotate, and analyze large amounts of spoken and written text in linguistically and/or pragmatically meaningful ways. It has become more desirable than ever before for language and linguistics researchers who use corpora in their research to gain an adequate understanding of the relevant NLP technology to take full advantage of its capabilities. This volume provides language and linguistics researchers with an accessible introduction to the state-of-the-art NLP technology that facilitates automatic annotation and analysis of large text corpora at both shallow and deep linguistic levels. The book covers a wide range of computational tools for lexical, syntactic, semantic, pragmatic, and discourse analysis, together with detailed instructions on how to obtain, install, and use each tool in different operating systems and platforms. The book illustrates how NLP technology has been applied in recent corpus-based language studies and suggests effective ways to better integrate such technology in future corpus linguistics research. This book provides language and linguistics researchers with a valuable reference for corpus annotation and analysis.

*The Dynamics of Dementia Communication* Alison Wray, 2020-03-19 It is well recognized

that when people are living with a dementia effective communication can be a challenge for both them and those they interact with Despite a plethora of good advice it can be surprisingly hard to sustain constructive communicative behaviours and to integrate them successfully into routine daily care and interaction The Dynamics of Dementia Communication asks why that is What is it about communication as a human social and cognitive practice that makes it so difficult to manage the disruptions caused by dementia Why is it so common to feel awkward confused or irritated when talking with a person living with a dementia Why is the experience of living with a dementia so personally and socially devastating What approaches to communication would work best and why To answer these questions the book integrates information from a wide range of different sources covering the biological social and emotional factors associated with the dementia experience New concepts and theoretical perspectives offer novel ways of thinking about the challenges of communication generally and in the context of dementia Topics explored include whether it is acceptable to deceive people living with a dementia and why society's failure to support people living with a dementia and their carers is so devastating The final chapter suggests what people living with a dementia need if communication is to promote and protect everyone's well being By providing a deeper understanding of what topples the best intentioned attempts at interaction and by explaining why poor communication affects everyone involved this book sets new agendas for improving the welfare of people living with a dementia their families and professional carers

**Multiphysics Methods and Analysis Applied to Nuclear Reactor Systems** Mark D. DeHart, Deokjung Lee, Kirk Atkinson, Emily Shemon, Julien Taforeau, 2025-11-21 Multiphysics modeling and simulation in nuclear engineering is critical for the design analysis and operation of advanced nuclear reactors These simulations encapsulate the intricate interactions between various physical phenomena such as fluid dynamics heat transfer and nuclear reactions providing a virtual yet robust framework for reactor assessment This approach significantly reduces reliance on expensive and potentially hazardous experimental testing Ensuring the validity of these models through experimental data and precise uncertainty quantification is paramount to align with the stringent safety and regulatory standards of the nuclear industry High fidelity computational methods thus play a pivotal role in advancing nuclear reactor safety and performance while navigating the complexities of regulatory compliance and operational efficiency in a rapidly evolving technological landscape This Research Topic is dedicated to presenting the forefront of research and

providing deep insights into the pivotal role that sophisticated simulations play in advancing nuclear reactor technologies. The Topic will explore the frontier of innovative computational methods that facilitate the integration of diverse physical phenomena. These multiphysics models are essential tools in the design and safety analysis of nuclear reactors, helping to predict and optimize performance under a wide array of operating conditions, reduce conservatism compared to more traditional methods, and gain physical insight that is currently unavailable through experimental data. A central theme of this collection is the rigorous experimental validation that these models undergo to confirm their accuracy and reliability. Such validation efforts are vital for ensuring that the simulations can be confidently used in critical decision-making processes. Additionally, this Topic will address the intricacies of uncertainty quantification within these models, a process that is becoming increasingly important as it directly impacts regulatory standards and the approval of new reactor designs. By bringing together this knowledge, this collection will illuminate the ongoing developments and challenges in the field while emphasizing the importance of precision and rigor in the modeling of advanced nuclear systems. Submissions are encouraged from a diverse international pool of contributors, including industry professionals, academic researchers, and research laboratory experts, to foster a multidisciplinary dialogue that addresses both present challenges and future needs in this rapidly growing field.

This Research Topic welcomes a mix of Original Research articles, Reviews, Mini-Reviews, Perspectives, and Data Reports. Manuscripts focused on the following areas are of particular interest to this Research Topic: Innovative Computational Methods; Explorations of new algorithms, software, or techniques that enhance multi-physics simulation; Model Integration and Coupling; Studies on how models representing distinct physical processes can be effectively integrated to provide comprehensive simulations; Design Optimization: The use of multiphysics simulations to inform and optimize reactor design; Safety Analysis: Contributions that utilize modeling and simulation to analyze and improve the safety of nuclear reactors; Experimental Validation: Papers that detail the validation of models against experimental data; Uncertainty Quantification: Studies focused on methods for quantifying uncertainties within simulations; Regulatory Implications: Discussions on how advanced simulations align with, inform, or challenge current regulatory frameworks; Case Studies: Detailed case studies of how multiphysics modeling and simulation have been applied in real-world scenarios; Experiment Optimization: Discussions on how multiphysics modeling and simulation has been used to prioritize experimental gaps, enhance data collection, and reduce the number of experimental variations needed.
