This conversion chart is based on educational levels from the published "Lexile Framework" chart. A smoothed curve was fit through the grade-level points indicated here, and regression analysis provided the equations:

$$\text{Lexile} = 500 \ln(\text{Grade Level}) \quad \text{or, the counterpart} \quad \text{GradeLevel} = e^{0.002(\text{Lexile})}$$

The resulting regression equation was then used to calculate the educational grade-levels in the above table. A separate study of over 700 titles confirmed that their Accelerated Reader® (Advantage Learning's reading management software) reading levels and Lexile ratings are correlated, and that regression analysis on published Accelerated Reader and Lexile reading levels produces a very similar conversion equation.
