Introduction To Mineralogy International Edition:

Introduction to Mineralogy William D. Nesse, 2009 *Introduction to Mineralogy* consolidates much of the material now covered in traditional mineralogy and optical mineralogy courses and focuses on describing minerals within their geologic context. It presents the important traditional content of mineralogy including crystallography, chemical bonding, controls on mineral structure, mineral stability, and crystal growth to provide a foundation that enables students to understand the nature and occurrence of minerals. Physical, optical, and X-ray powder diffraction techniques of mineral study are described in detail, and common chemical analytical methods are outlined as well. Detailed descriptions of over 100 common minerals are provided, and the geological context within which these minerals occur is emphasized. Appendices provide tables and diagrams to help students with mineral identification using both physical and optical properties. Numerous line drawings, photographs, and photomicrographs help make complex concepts understandable. *Introduction to Mineralogy* not only provides specific knowledge about minerals but also helps students develop the intellectual tools essential for a solid scientific education. This comprehensive text is useful for undergraduate students in a wide range of mineralogy courses.

Hydrothermal Mineral Deposits Franco Pirajno, 2012-12-06 This book is intended primarily for exploration geologists and post graduate students attending specialist courses in mineral exploration. Exploration geologists are engaged not only in the search for new mineral deposits but also in the extension and re-assessment of existing ones. To succeed in these tasks, the exploration geologist is required to be a generalist of the Earth sciences rather than a specialist. The exploration geologist needs to be familiar with most aspects of the geology of ore deposits and detailed knowledge as well as experience play an all-important role in the successful exploration for mineral commodities. In order to achieve this, it is essential that the exploration geologist be up to date with the latest developments in the evolution of concepts and ideas in the Earth sciences. This is no easy task as thousands of publications appear every year in an ever-increasing number of journals, periodicals, and books. For this reason, it is also difficult at times to locate appropriate references on a particular mineral deposit type, although this problem is alleviated by the existence of large bibliographic data bases of geological records, abstracts, and papers on computers. During my teaching to explorationists and indeed during my years of work as an explorationist, the necessity of having a text dealing with the fundamental aspects of hydrothermal mineral deposits has always been compelling. Metallic mineral deposits can be categorised into three great families, namely: 1 magmatic, 2 sedimentary, and residual. 3
