Inventory Management And Production Planning And Scheduling:

Inventory Management and Production Planning and Scheduling Edward A. Silver, David F. Pyke, Rein Peterson, 1998-01-23 This is a revision of a classic which integrates managerial issues with practical applications providing a broad foundation for decision making It incorporates recent developments in inventory management including Just in Time Management Materials Requirement Planning and Total Quality Management **Production Planning, Scheduling, and Inventory Control** Douglas C. Montgomery, William L. Berry, 1974 **Operations Research in Production Planning, Scheduling, and Inventory Control** Lynwood A. Johnson, Douglas C. Montgomery, 1974 Textbook *Inventory Management and Production Planning and Scheduling* E.A. Silver, David F. Pyke, Rein Peterson, 2013 **Instructor's Resource Guide to Accompany Inventory Management and Production Planning and Scheduling, 3rd Edition** Edward Allen Silver, 1998 **Production Planning and Inventory Control** John F. Magee, David M. Boodman, 1967

Decision Systems for Inventory Management and Production Planning Edward A. Silver, Rein Peterson, 1985-01-18 An in depth discussion of the major decisions in production planning scheduling and inventory management faced by organizations both private and public Strategic and operational issues are covered as well as the latest systems used to make decisions including Just in Time Manufacturing KANBAN Distribution Requirements Planning and PUSH Control A series of cases focusing on one organization complement the text s discussion and several problem sets are also included An extensive list of references allows the advanced student to pursue topics of interest in more detail Production Planning, Scheduling, and Inventory Control Powell Niland, 1970 *Production Planning and Inventory Control* Seetharama L. Narasimhan, Dennis W. McLeavey, Peter Billington, 1995 A collection of stories and essays written by my students at the University of P cs Hungary **Production and Inventory Management**, 1986 Scheduling, Inventory Management and Production Planning Pedram Hooshangitabrizi, 2021 This thesis presents formulations and solution methods for three types of problems in operations management that have received major attention in the last decade and arise in several applications We focus on the use of mixed integer programming theory robust optimization and decomposition based methods to solve each of these three problems We first study an online scheduling problem dealing with patients multiple requests for chemotherapy treatments We propose an adaptive and flexible scheduling procedure capable of handling both the dynamic uncertainty arising from appointment requests that appear on waiting lists in real time and capable of dealing with unexpected changes The proposed scheduling procedure incorporates several circumstances prevalent at oncology clinics such as specific intervals between two consecutive appointments and specific time slots and chairs Computational experiments show the proposed procedure achieves consistently better results for all considered objective functions compared to those of the scheduling system in use at the cancer centre of a major metropolitan hospital in Canada We next present an inventory management problem that integrates perishability demand uncertainty and order modification decisions We formulate the

problem as a two stage robust integer optimization model and develop an exact column and row generation algorithm to solve it Based on computational results we show that considering order modification can significantly reduce the total cost Moreover comparing the results obtained by the proposed robust model to those obtained from the deterministic and stochastic variants we note that their performances are similar in the risk neutral setting while solutions from the robust models are significantly superior in the risk averse setting Finally we study decomposition strategies for a class of production planning problems with multiple items unlimited production capacity and inventory bounds Based on a new mixed integer programming formulation we proposed a Lagrangian relaxation for the problem We propose a deflected subgradient method and a stabilized column generation algorithm to solve the Lagrangian dual problem Computational results confirm that the proposed formulation outperforms the previously proposed models and methods Further analysis shows the impact of using decomposition techniques in providing tighter bounds
