Java is actually a decent programming language developed at Sun Microsystems. It was originally used for Internet applications or applets. Those applets are embedded on web pages and run in the browser. Java uses a special format known as byte code instead of an ordinary machine code. Java is not limited to Internet applications; it is technically a complete general object-oriented programming language which can be used to develop all sorts of applications. The syntax of Java is very much similar to the syntax of C but removes its error-prone features and complications.
