Software Engineering Salman Abdul Moiz, 2025-06-01 **The Leprechauns of Software Engineering** Laurent Bossavit, 2015-06-28 The software profession has a problem widely recognized but which nobody seems willing to do anything about: a variant of the well known telephone game where some trivial rumor is repeated from one person to the next until it has become distorted beyond recognition and blown up out of all proportion. Unfortunately the objects of this telephone game are generally considered cornerstone truths of the discipline to the point that their acceptance now seems to hinder further progress. This book takes a look at some of those ground truths, the claimed 10x variation in productivity between developers, the software crisis, the cost of change curve, the cone of uncertainty and more. It assesses the real weight of the evidence behind these ideas and confronts the scary prospect of moving the state of the art forward in a discipline that has had the ground kicked from under it. *Ernst Denert Award for Software Engineering 2019* Michael Felderer, Wilhelm Hasselbring, Heiko Koziol, Florian Matthes, Lutz Prechelt, Ralf Reussner, Bernhard Rumpe, Ina Schaefer, 2020-12-03 This open access book provides an overview of the dissertations of the five nominees for the Ernst Denert Award for Software Engineering in 2019. The prize kindly sponsored by the Gerlind Ernst Denert Stiftung is awarded for excellent work within the discipline of Software Engineering which includes methods, tools and procedures for better and efficient development of high quality software. An essential requirement for the nominated work is its applicability and usability in industrial practice. The book contains five papers describing the works by Sebastian Baltes (University of Trier) on Software Developers Work Habits and Expertise, Timo Greifenberg's thesis on Artefaktbasierte Analyse modellgetriebener Softwareentwicklungsprojekte, Marco Konersmann's (University of Duisburg-Essen) work on Explicitly Integrated Architecture, Marija Selakovic's (TU Darmstadt) research about

Actionable Program Analyses for Improving Software Performance and Johannes Sp th s Paderborn U thesis on Synchronized Pushdown Systems for Pointer and Data Flow Analysis which actually won the award The chapters describe key findings of the respective works show their relevance and applicability to practice and industrial software engineering projects and provide additional information and findings that have only been discovered afterwards e g when applying the results in industry This way the book is not only interesting to other researchers but also to industrial software professionals who would like to learn about the application of state of the art methods in their daily work *Recent Advances In Mathematics, Statistics And Computer Science 2015 - International Conference* Arun Kumar Sinha,R Rajesh,Prabhat Ranjan,Rajesh Pratap Singh,2016-06-09 This unique volume presents the scientific achievements significant discoveries and pioneering contributions of various academicians industrialist and research scholars The book is an essential source of reference and provides a comprehensive overview of the author s work in the field of mathematics statistics and computer science
