Process Intensification Technologies for Biodiesel Production Anton Alexandru Kiss, 2014-03-15 This book is among the first to address the novel process intensification technologies for biodiesel production in particular the integrated reactive separations It provides a comprehensive overview illustrated with many industrially relevant examples of novel reactive separation processes used in the production of biodiesel e g fatty acid alkyl esters reactive distillation reactive absorption reactive extraction membrane reactors and centrifugal contact separators Readers will also learn about the working principles design and control of integrated processes while also getting a relevant and modern overview of the process intensification opportunities for biodiesel synthesis Biodiesel is a biodegradable and renewable fuel that currently enjoys much attention In spite of the recent advances the existing biodiesel processes still suffer from problems associated with the use of homogeneous catalysts e g salt waste streams and the key limitations imposed by the chemical reaction equilibrium thus leading to severe economic and environmental penalties The integration of reaction and separation into one operating unit overcomes equilibrium limitations and provides key benefits such as low capital investment and operating costs Many of these processes can be further enhanced by heat integration and powered by heterogeneous catalysts to eliminate all conventional catalyst related operations using the raw materials efficiently and the reaction volume while offering high conversion and selectivity and significant energy savings The targeted audience of this book includes both academia students and researchers and industry project leaders technology managers researchers biodiesel producers and equipment suppliers

Process Integration in Biochemical Engineering Urs von Stockar, Luuk van der Wielen, 2003-04-08 Process integration has been one of the most active research fields in Biochemical Engineering over the last decade and it will continue to be so if bioprocessing is to become more rational efficient and productive This volume outlines what has been achieved in recent years Written by experts who have made important contributions to the European Science Foundation Program on Process Integration in Biochemical Engineering the volume focuses on the progress made and the major opportunities and in addition on the limitations and the challenges in bioprocess integration that lie ahead The concept of bioprocess integration is treated at various levels including integration at the molecular biological bioreactor and plant levels but also accounting for the integration of separation and mass transfer operations and biology fluid dynamics and physiology as well as basic science and process technology *Dynamics and Control of Chemical Reactors, Distillation Columns and Batch Processes (DYCORD+ '92)* J.G. Balchen, E.D. Gilles, K.V. Waller, J.B. Arun S. Mujumdar, 1984 **Scientific and Technical Aerospace Reports**, 1992 *Problem Solving in Chemical and Biochemical Engineering with POLYMATH, Excel, and MATLAB*

Michael B. Cutlip, Mordechai Shacham, 2008 *Problem Solving in Chemical and Biochemical Engineering with POLYMATH, Excel, and MATLAB*. Second Edition is a valuable resource and companion that integrates the use of numerical problem solving in the three most widely used software packages: POLYMATH, Microsoft Excel, and MATLAB. Recently developed POLYMATH capabilities allow the automatic creation of Excel spreadsheets and the generation of MATLAB code for problem solutions. Students and professional engineers will appreciate the ease with which problems can be entered into POLYMATH and then solved independently in all three software packages while taking full advantage of the unique capabilities within each package. The book includes more than 170 problems requiring numerical solutions. This greatly expanded and revised second edition includes new chapters on getting started with and using Excel and MATLAB. It also places special emphasis on biochemical engineering with a major chapter on the subject and with the integration of biochemical problems throughout the book.

General Topics and Subject Areas Organized by Chapter:

- Introduction to Problem Solving with Mathematical Software Packages
- Basic Principles and Calculations
- Regression and Correlation of Data
- Introduction to Problem Solving with Excel
- Introduction to Problem Solving with MATLAB
- Advanced Problem Solving Techniques
- Thermodynamics
- Fluid Mechanics
- Heat Transfer
- Mass Transfer
- Chemical Reaction Engineering
- Phase Equilibrium and Distillation
- Process Dynamics and Control
