Proceedings of International Conference on Frontiers in Computing and Systems Debotosh Bhattacharjee, Dipak Kumar Kole, Nilanjan Dey, Subhadip Basu, Dariusz Plewczynski, 2020-11-23 This book gathers outstanding research papers presented at the International Conference on Frontiers in Computing and Systems COMSYS 2020 held on January 13 15 2019 at Jalpaiguri Government Engineering College West Bengal India and jointly organized by the Department of Computer Science Engineering and Department of Electronics Communication Engineering The book presents the latest research and results in various fields of machine learning computational intelligence VLSI networks and systems computational biology and security making it a rich source of reference material for academia and industry alike **influence of channel estimation errors in mimo-ofdm systems** [Xavier Llorens Sole, Maurizio Magarini, 2004 *Proceeding of Fifth*

International Conference on Microelectronics, Computing and Communication Systems Vijay Nath, J. K. Mandal, 2021-09-09 This book presents high quality papers from the Fifth International Conference on Microelectronics Computing Communication Systems MCCS 2020 It discusses the latest technological trends and advances in MEMS and nanoelectronics wireless communication optical communication instrumentation signal processing image processing bioengineering green energy hybrid vehicles environmental science weather forecasting cloud computing renewable energy RFID CMOS sensors actuators transducers telemetry systems embedded systems and sensor network applications It includes papers based on original theoretical practical and experimental simulations development applications measurements and testing The applications and solutions discussed here provide excellent reference material for future product development

Optimization Methods in Mobile Communication Systems Milind Pande, Anand J. Kulkarni, Apoorva S. Shastri, 2025-10-22 This book presents the result of an innovative challenge to create a systematic literature overview driven by machine generated content This machine generated volume with chapter introductions by the human expert of summaries of the existing studies furthers our understanding of the optimization methods in mobile communication systems The book provides a machine generated comprehensive yet classified review of the optimization methods techniques and approaches associated with different mobile communications and systems including wavelet based CR OFDM systems MIMO slot antenna with low mutual coupling for 5G networks etc It also covers mainly the techniques for performance analysis of MIMO systems such as the hybrid filtering technique for MIMO OFDM systems and artificial intelligence solutions beyond 5G radio access networks Questions and related keywords were prepared for the machine to query discover collate and structure by Artificial Intelligence AI clustering The AI based approach seemed especially suitable to provide an innovative perspective as the topics are indeed both complex interdisciplinary and multidisciplinary Springer Nature has published much on these topics in its journals over the years so the challenge was for the machine to identify the most relevant content and present it in a structured way that the reader would find useful The automatically generated literature summaries in this book are intended

as a springboard to further discoverability They are particularly useful to readers with limited time looking to learn more about the subject quickly and especially if they are new to the topics Springer Nature seeks to support anyone who needs a fast and effective start in their content discovery journey from the undergraduate student exploring interdisciplinary content to Master or PhD thesis developing research questions to the practitioner seeking support materials this book can serve as an inspiration to name a few examples It is important to us as a publisher to make advances in technology easily accessible to our authors and find new ways of AI based author services that allow human machine interaction to generate readable usable collated research content

Signal Processing, Channel Estimation and Link Adaptation in MIMO-OFDM Systems

Jianjun Ran,2008 ICT for Intelligent Systems Jyoti Choudrie,Parikshit N. Mahalle,Thinagaran Perumal,Amit Joshi,2026-01-01 This book gathers papers addressing state of the art research in all areas of information and communication technologies and their applications in intelligent computing cloud storage data mining and software analysis It presents the outcomes of the 9th International Conference on Information and Communication Technology for Intelligent Systems ICTIS 2025 held in Bangkok Thailand The book discusses the fundamentals of various data analysis techniques and algorithms making it a valuable resource for researchers and practitioners alike Channel Estimation and Data Detection for Mobile MIMO OFDM Systems Jie Gao,2005 Designing spectral efficient high speed wireless links that offer high quality of service and range capability has been a critical research and engineering challenge In this thesis we mainly address the complexity and performance issues of channel estimation and data detection in multiple input multiple output MIMO orthogonal frequency division multiplexing OFDM systems over time varying channels We derive the probability density function pdf expressions of the condition number i e the maximum to minimum singular value ratio MMSVR of the channel state information matrix of MIMO OFDM systems It is shown that this ratio is directly related to the noise enhancement in open loop systems and provides a significant insight on the system capacity A decision directed DD maximum a posteriori probability MAP channel estimation scheme of MIMO systems is derived Error performance of a zero forcing receiver with the DD MAP and perfect channel estimates is provided and compared This scheme has a low complexity and can be applied to time varying Rayleigh fading channels with an arbitrary spaced time correlation function We propose an iterative channel estimation and data detection scheme for MIMO OFDM systems in the presence of inter carrier interference ICI due to the

nature of time varying channels An ICI based minimum mean square error MMSE detection scheme is derived An expectation maximization EM based least square LS channel estimator is proposed to minimize the mean square error MSE of the channel estimates and to reduce the complexity of the implementation With the estimate of the channel and initially detected symbols ICI is estimated and removed from the received signal Thus more accurate estimation of the channel and data detection can be obtained in the next iteration An EM based MAP channel estimator is derived by exploiting the frequency time correlation of the pilot and data sub carriers Performance comparison is made between the proposed schemes and the ideal case time invariant channels and perfect channel estimation We optimize the data transmission by exploiting the long term correlation characteristics The transmitted data is successively detected without an error floor in spatially correlated channels The algorithms proposed in this thesis allow low complexity implementation of channel estimation and data detection for MIMO OFDM systems over time varying fading channels while providing good error performance
