Petroleum Generation, Migration and Storage in Shale System Xiaomin Xie, Feng Yang, Jianhua Zhao, Juan Teng, Tao Hu, Chunqing Jiang, Jun Wang, 2023-11-16 Shale resource systems include conventional source rocks unconventional resources such as shale gas and shale oil system Regardless of the type of shale resource system the issues of petroleum formation processes including petroleum generation migration and storage are very important in petroleum evaluation and exploration Because of the complicated and different geological settings in the world the evaluation approaches and workflows may not be easily implemented following those from successful examples Thus the mechanisms of petroleum formation are fundamental for petroleum exploration and production all over in the world The reason this special issue focuses on the shale system is because the shale system is not only the main source rock type but also the main unconventional reservoir type in the world

Role of Interfaces in Environmental Protection Sandor Barany, 2012-12-06 The NATO Advanced Research Workshop Role of Interfaces in Environmental Protection has been held on May 27 30 2002 in Miskolc Hungary under leadership of co directors Prof Sandor Barany from the University of Miskolc Hungary and Prof Nataliya Klymenko National Academy of Sciences of Ukraine The objective of the ARW was to highlight colloidal and biocolloidal aspects of environmental pollution and technologies to monitor remediate abate and prevent pollution It is known that the solution of majority of environmental problems is closely connected with phenomena at the interfaces The behaviour transport of dispersed particles in the environment the main phase separation methods in water treatment purification of liquids aerosols removal many soil remediation processes as well as the methods of protection of human organisms from hazardous matters are based on concepts of colloid chemistry i e properties of interfaces and their behaviour in different media Examples of these methods are filtration ultrafiltration flotation coagulation hetero coagulation and flocculation adsorption adhesion of micro organisms to surfaces membrane separation methods etc A very important and special aspect of the topic is the human protection using colloid chemical approaches i e the adsorption aggregation and adagulation

properties of different materials. Examples are adsorption of hazardous organic materials, drugs, heavy metals and radionuclides on activated carbon, silica, cellulose derivatives etc.

Dielectric Films for Advanced Microelectronics Mikhail Baklanov, Martin Green, Karen Maex, 2007-03-19

The topic of thin films is an area of increasing importance in materials science, electrical engineering and applied solid state physics with both research and industrial applications in microelectronics, computer manufacturing and physical devices. Advanced high performance computers, high definition TV, broadband imaging systems, flat panel displays, robotic systems and medical electronics and diagnostics are a few examples of the miniaturized device technologies that depend on the utilization of thin film materials. This book presents an in depth overview of the novel developments made by the scientific leaders in the area of modern dielectric films for advanced microelectronic applications. It contains clear, concise explanations of material science of dielectric films and their problems for device operation including high k, low k, medium k dielectric films and also specific features and requirements for dielectric films used in the packaging technology. A broad range of related topics are covered from physical principles to design, fabrication, characterization and applications of novel dielectric films.
