Getting Started With Django Channels Real Python:

Getting started with Django 6 Andres, Django is a framework with many options it allows us to create applications with the language of the moment Python a modular programming language with an impeccable syntax that we can also use in a web environment It offers us a modular scheme between projects and applications an important set of packages to extend the already complete framework and with this the creation of scalable projects It is a framework that by using Python brings us its benefits of a clean clear precise syntax a modular and scalable environment through packages This book is for anyone who wants to start developing with Django you may come from another framework or even PHP in both cases it is a great idea to learn from one of the most advanced and complete web frameworks you can find For those who want to know the framework and who know other web frameworks but do not have the necessary knowledge to venture into these For people who want to improve a skill in web development who want to grow as a developer and who want to keep climbing their way with other frameworks similar to this one For those who want to learn or improve a skill and with this increase their chances of employment or to carry out a personal project This book has a total of 18 chapters it is recommended that you read in the order in which they are arranged and as we explain the components of the framework go directly to the practice replicate test and modify the codes that we show in this book Chapter 1 In this chapter we are going to present the software necessary to create projects in Django Python as a programming language and in which the framework is developed a code editor such as VSS until preparing the environment Chapter 2 In this chapter we are going to create the virtual environment to develop the application we will create the project in Django we will learn about its basic structure and the use of applications and projects in Django Chapter 3 In this chapter we will give an introduction to Python knowing its basic characteristics and functionalities such as variables data types functions classes among others Chapter 4 In this chapter we are going to create a simple CRUD type application and learn about all the elements of the framework that this implies such as management of forms templates views and models in addition to the management of CSRF tokens migrations databases among others Chapter 5 In this chapter we are going to work with Django Admin to provide an interface for managing site content that is the typical CRUDs we will learn how to customize them at the class level validations interpret requests among others Chapter 6 In this chapter we are going to introduce the use of forms in Django definition validations saving and structure in general Chapter 7 In this chapter we are going to present the different functionalities that templates have in Django Chapter 8 In this chapter we are going to introduce some functions that we can use with QuerySets when building queries Chapter 9 In this chapter we are going to build a Rest API with the Django Rest Framework Chapter 10 In this chapter we are going to consume the above Rest Api with an app in Vue 3 and NaiveUI lists forms will be created and integrated with Tailwind css Chapter 11 In this chapter we are going to learn about class based views by performing the typical operations that are needed in modern web development Chapter 12 In this chapter we are going to learn how to work with files in Django

specifically reading and generating excel and CSV and generating PDFs Chapter 13 In this chapter we are going to show the code of an application created with Alpine js to create a to do list component Chapter 14 In this chapter we are going to adapt the Alpine js application presented in the previous chapter so that it works together with Django Chapter 15 In this chapter we are going to use Django Channels to learn how to create systems with full duplex communication and be able to create our own websockets and consume them we will see how to create single and multiple channel applications as well as how to consume a consumer from an app in Vue Chapter 16 In this chapter we are going to create a personalized authentication module with login registration recover passwords sending emails uploading the avatar among others Chapter 17 In this chapter we are going to learn how to use the signals system to intercept events in Django such as creation of entities in the database and execute custom code Chapter 18 In this chapter we will introduce the use of testing to create automated functions and test different modules of our application

Getting started with FastApi Andrés Cruz Yoris, FastAPI is a great web framework for creating web APIs with Python It offers us multiple features with which it is possible to create modular well structured scalable APIs with many options such as validations formats typing among others When you install FastAPI two very important modules are installed Pydantic that allows the creation of models for data validation Starlette which is a lightweight ASGI tooltip used to create asynchronous or synchronous web services in Python With these packages we have the basics to create APIs but we can easily extend a FastAPI project with other modules to provide the application with more features such as the database template engines among others FastAPI is a high performance easy to learn start up framework It is ideal for creating all kinds of sites that not only consist of APIs but we can install a template manager to return complete web pages This book is mostly practical we will learn the basics of FastAPI knowing its main features based on a small application that we will extend chapter after chapter and whose content you can see below Chapter 1 Required software and tools installation We present some essential commands to develop in FastApi we will prepare the environment and we will give an introduction to the framework Chapter 2 Introduction to FastApi One of the main factors in FastApi is the creation of resources for the API through functions in this section we will deal with the basics of this introducing routing between multiple files as well as the different options for the arguments and parameters of these routes Chapter 3 Routing in FastApi In this section learn how to handle HTTP status codes from API methods and also handle errors exceptions from API methods Chapter 4 Errors and status codes In this section we will see how to create sample data to use from the automatic documentation that FastAPI offers for each of the API methods Chapter 5 Declare sample data In this chapter we will see how to implement the upload of files knowing the different existing variants in FastAPI Chapter 6 File Upload In this chapter we will see installing and using a template engine in Python specifically Jinja with which we can return responses in HTML format Chapter 7 Database In this chapter we will see installing and using a template engine in Python specifically Jinja with which we can return responses in HTML format Chapter 8 Template in FastAPI In this chapter we will

learn how to use dependencies Chapter 9 Dependencies In this chapter we will learn how to use dependencies which are the key element in FastAPI for its mediation and reuse the repository pattern and dependency types Chapter 10 Middlewares In this chapter we will see how to create a user module to register users login generate access tokens and logout Chapter 11 Authentication In this chapter we will learn about some particularities and functionalities of FastAPI such as the use of annotations and the Ellipsis operator Chapter 12 Annotations Ellipsis notation and return types In this chapter we will see how to implement unit tests Chapter 13 Testing In this chapter we will see how to implement unit tests in a FastAPI project using Pytest and we will also discuss their importance Chapter 14 WebSockets and Real Time We talked about the use of WebSockets what they are for examples of use single or multiple connection and how to implement and consume them through an app in Vue with authentication and Rest API Chapter 15 Deployment We will see how we can deploy the project in FastAPI the Railway Dockerization service and also using Docker Chapter 16 General features In this chapter we will learn about some general aspects applied to FastAPI debug mode using Visual Studio Code among others Chapter 17 Key Extensions in FastAPI for Modern Development Let s look at some fundamental extensions for modern development in FastAPI such as email environment variable handling users limiting requests Socket etc
