Example: Volume 1 Paul Garrett, 2018-09-20 This is Volume 1 of a two volume book that provides a self contained introduction to the theory and application of automorphic forms using examples to illustrate several critical analytical concepts surrounding and supporting the theory of automorphic forms The two volume book treats three instances starting with some small unimodular examples followed by adelic GL_2 and finally GL_n Volume 1 features critical results which are proven carefully and in detail including discrete decomposition of cuspforms meromorphic continuation of Eisenstein series spectral decomposition of pseudo Eisenstein series and automorphic Plancherel theorem Volume 2 features automorphic Green s functions metrics and topologies on natural function spaces unbounded operators vector valued integrals vector valued holomorphic functions and asymptotics With numerous proofs and extensive examples this classroom tested introductory text is meant for a second year or advanced graduate course in automorphic forms and also as a resource for researchers working in automorphic forms analytic number theory and related fields

Recent Advances in Differential Equations and Applications Juan Luis García Guirao, José Alberto Murillo Hernández, Francisco Periago Esparza, 2019-01-04 This work gathers a selection of outstanding papers presented at the 25th Conference on Differential Equations and Applications 15th Conference on Applied Mathematics held in Cartagena Spain in June 2017 It supports further research into both ordinary and partial differential equations numerical analysis dynamical systems control and optimization trending topics in numerical linear algebra and the applications of mathematics to industry The book includes 14 peer reviewed contributions and mainly addresses researchers interested in the applications of mathematics especially in science and engineering It will also greatly benefit PhD students in applied mathematics engineering and physics

Perspectives in Analysis Michael Benedicks, Peter Jones, Stanislav Smirnov, 2006-06-01 The Conference Perspectives in

Analysis was held during May 26-28, 2003 at the Royal Institute of Technology in Stockholm, Sweden. The purpose of the conference was to consider the future of analysis along with its relations to other areas of mathematics and physics and to celebrate the seventy-fifth birthday of Lennart Carleson. The scientific theme was one with which the name of Lennart Carleson has been associated for over fifty years. His *modus operandi* has long been to carry out a twofold approach to the selection of research problems. First, one should look for promising new areas of analysis, especially those having close contact with physically oriented problems of geometric character. The second step is to select a core set of problems that require new techniques for their resolutions. After making a central contribution, Lennart would usually move on to a new area, though he might return to the topic of his previous work if new techniques were developed that could break old mathematical logjams. Lennart's operating approach is based on fundamental realities of modern mathematics as well as his own inner convictions. Here we first refer to an empirical fact of mathematical research: All topics have a finite half-life, with fifteen years being an upper bound for most areas. After that time, it is usually a good idea to move on to something new.

Operator Algebras Ola Bratteli, Sergey Neshveyev, Christian Skau, 2007-01-19. The theme of the first Abel Symposium was operator algebras in a wide sense. In the last 40 years, operator algebras have developed from a rather special discipline within functional analysis to become a central field in mathematics, often described as non-commutative geometry. It has branched out in several sub-disciplines and made contact with other subjects. The contributions to this volume give a state-of-the-art account of some of these sub-disciplines, and the variety of topics reflects to some extent how the subject has developed. This is the first volume in a prestigious new book series linked to the Abel prize.

Domain Decomposition Methods in Science and Engineering XXIII Chang-Ock Lee, Xiao-Chuan Cai, David E. Keyes, Hyea Hyun Kim, Axel Klawonn, Eun-Jae Park, Olof B. Widlund, 2017-03-15. This book is a collection of papers presented at the 23rd International Conference on Domain Decomposition Methods in Science and Engineering held on Jeju Island, Korea, on July 6-10, 2015. Domain decomposition methods solve boundary value problems by splitting them into smaller boundary value problems on subdomains and iterating to coordinate the solution between adjacent subdomains. Domain decomposition methods have considerable potential for a parallelization of the finite element methods and serve as a basis for distributed parallel computations.
