Negotiating Control Keri K. Stephens, 2018-07-23 The fast food worker finds refuge in a bathroom stall to respond to her boyfriend's fifth message in an hour The human resources manager sees a colleague sending a stream of text messages during a meeting and quickly grabs her mobile to make sure she's also multitasking These scenarios are common but unique to the 21st century Until the early 2000s workplaces provided most of the computers and portable devices that employees used to perform their jobs and communicate with others Today people bring their own mobile devices to work and create new norms for how communication occurs in the workplace Managers and organizations respond by setting and enforcing new policies that are intended to help them navigate the ever changing mobile communication environment In *Negotiating Control* Organizations and Mobile Communication Keri K Stephens responds to the struggles of employees organizations and even friends and family as they try to understand new norms for connectedness in the workplace Drawing on over two decades of her own research and fieldwork representing people in over 35 different types of jobs Stephens claims that though people assume mobile communication is a uniform practice there are underlying and often hidden issues of control and power at play which shape how people are permitted and expected to use mobiles to communicate while working The accounts Stephens offers reveal the many ways that these portable tools are

actually used across work environments today integrating information communication and data and connecting people in expected and often conflicting ways [NetAdmin 01/2018 144](#), 2018-01-03 IoT Edge Computing IDC 2020 Edge Infrastructure 18% IDC 2017 IoT 2020 5 655 1 000 Gateway IaaS [Embracing and de-risking digital transformation](#) Probrand Group, 2015-12-09 Throughout this edition we review new technologies which are helping organisations to manage change in a positive way about digital transformation **Bring Your Own Device (BYOD) to Work** Bob Hayes, Kathleen Kotwica, 2013-03-25 Bring Your Own Device BYOD to Work examines the emerging BYOD Bring Your Own Device to work trend in corporate IT BYOD is the practice of employees bringing personally owned mobile devices e.g. smartphones, tablets, laptops to the workplace and using those devices to access company resources such as email, file servers and databases. BYOD presents unique challenges in data privacy, confidentiality, security, productivity and acceptable use that must be met proactively by information security professionals. This report provides solid background on the practice, original research on its pros and cons and actionable recommendations for implementing a BYOD program. Successful programs are cross-functional efforts including information technology, human resources, finance, legal, security and business operating teams. This report is a valuable resource to any security professional considering a BYOD program. Bring Your Own Device BYOD to Work is a part of Elsevier's Security Executive Council Risk Management Portfolio, a collection of real-world solutions and how-to guidelines that equip executives, practitioners and educators with proven information for successful security and risk management programs. Presents research data associated with BYOD and productivity in the workplace. Describes BYOD challenges, risks and liabilities. Makes recommendations for the components a clearly communicated BYOD program should contain **Cyber Security Mobile Device and BYOD Security** Mark Hayward, 2015-11-01 Understanding the Threat Landscape for Mobile Devices and BYOD Environments The rise of mobile devices and Bring Your Own Device BYOD practices has transformed how organizations operate. These changes have brought about numerous advantages such as flexibility and increased productivity. Yet they also pave the way for various security threats. Cybercriminals target mobile devices and BYOD environments as they often lack the same level of security controls found in traditional corporate systems. With employees using personal gadgets for work-related tasks, attackers see opportunities to exploit these less secure devices. Wireless networks, unmonitored access points and app vulnerabilities are among the key attack vectors **Mobile Security and Privacy** Man Ho Au, Raymond Choo, 2016-09-14 Mobile Security and Privacy: Advances, Challenges and Future Research Directions provides the first truly holistic view of leading edge mobile security research from Dr Man Ho Au and Dr Raymond Choo, leading researchers in mobile security. Mobile devices and apps have become part of everyday life in both developed and developing countries. As with most evolving technologies, mobile devices and mobile apps can be used for criminal exploitation. Along with the increased use of mobile devices and apps to access and store sensitive, personally identifiable information (PII), there has come an increasing need for the community to have a better understanding of the associated security and

privacy risks Drawing upon the expertise of world renowned researchers and experts this volume comprehensively discusses a range of mobile security and privacy topics from research applied and international perspectives while aligning technical security implementations with the most recent developments in government legal and international environments The book does not focus on vendor specific solutions instead providing a complete presentation of forward looking research in all areas of mobile security The book will enable practitioners to learn about upcoming trends scientists to share new directions in research and government and industry decision makers to prepare for major strategic decisions regarding implementation of mobile technology security and privacy In addition to the state of the art research advances this book also discusses prospective future research topics and open challenges Presents the most current and leading edge research on mobile security and privacy featuring a panel of top experts in the field Provides a strategic and international overview of the security issues surrounding mobile technologies Covers key technical topics and provides readers with a complete understanding of the most current research findings along with future research directions and challenges Enables practitioners to learn about upcoming trends scientists to share new directions in research and government and industry decision makers to prepare for major strategic decisions regarding the implementation of mobile technology security and privacy initiatives

Bring Your Own Device Security Policy Compliance Framework Rathika Palanisamy, Azah Anir Norman, Miss Laiha Mat Kiah, Tutut Herawan, 2025-05-13 Proliferation of Bring Your Own Device BYOD has instigated a widespread change fast outpacing the security strategies deployed by organizations The influx of these devices has created information security challenges within organizations further exacerbated with employees inconsistent adherence with BYOD security policy To prevent information security breaches compliance with BYOD security policy and procedures is vital This book aims to investigate the factors that determine employees BYOD security policy compliance by using mixed methods approach Security policy compliance factors BYOD practices and security risks were identified following a systematic review approach Building on Organizational Control Theory Security Culture and Social Cognitive Theory a research framework positing a set of plausible factors determining BYOD security policy compliance was developed Next with a purposive sample of eight information security experts from selected public sector organizations interviews and BYOD risk assessments analysis were performed to furnish in depth insights into BYOD risks its impact on organizations and recommend control measures to overcome them This led to the suggestion of four control measures to mitigate critical BYOD security risks such as Security Training and Awareness SETA policy top management commitment and technical countermeasures The control measures were mapped into the research framework to be tested in the following quantitative phase The proposed research framework was tested using survey results from 346 employees of three Critical National Information Infrastructure CNII agencies Using Partial Least Squares Structural Equation Modelling PLS SEM the framework s validity and reliability were evaluated and hypotheses were tested Findings show that perceived mandatoriness self efficacy and psychological ownership

are influential in predicting employees BYOD security policy compliance Specification of security policy is associated with perceived mandatoriness while BYOD IT support and SETA are significant towards self efficacy Unexpectedly security culture has been found to have no significant relationship to BYOD security policy compliance Theoretical practical and methodological contributions were discussed and suggestions for future research were recommended The analysis led to a number of insightful findings that contribute to the literature and the management which are predominantly centered on traditional computing In view of the ever increasing BYOD threats to the security of government information it is imperative that IT managers establish and implement effective policies to protect vital information assets Consequently the findings of this study may benefit policymakers particularly in the public sector in their efforts to increase BYOD security policy compliance among employees

Rapidly Deployable Mobile Security Solutions for the Military: Navy Cyber Policies and Threats, Security, Mobile Devices, Bring Your Own Device (BYOD), Risk Management, Android Application Program U. S. Military, Department of Defense (DoD), U. S. Government, 2018-02-25 The Navy has seen a significant increase in the presence of mobile and smart devices on its units due to advancements in technology and younger sailors desire to be connected at all times These devices create security threats due to their easily concealable size and their host of connectivity and image related features The insider threat intentional or not now includes the ability to take photos record conversations share data wirelessly and communicate official use and classified information all more easily than ever before Current enterprise solutions and associated policy does not address managing personal devices In fact management of personal devices is currently outside the Department of Defense DOD effort to control Personal Electronic Devices PED since the organization does not own the device and therefore has no way to mandate what must or must not be installed on them The current path to a bring your own device BYOD policy is unclear Security vulnerabilities with these devices have not been addressed in a uniform matter in policy or in practice It is with these statements in mind that we address how to take the first steps in developing feasible management of personal devices on naval units and potentially throughout the DOD In this study we provide a thorough evaluation of National Institute for Standards and Technology Defense Information Systems Agency and DOD publications to provide a starting point for adapting current policy and to guide the development of our application We then examine the feasibility of implementable software application solutions to hardware features that pose a threat to security Specific research addresses why each hardware feature on a mobile device is a security concern how it is controlled inside the Android Studio API and how we utilize these controls to lockdown and then unlock said hardware features through a simple proof of concept Android application Finally we provide examples of how future work can grow our application into a security manager controlled program to secure devices and find a path toward making BYOD a reality

Mobile Phone Security and Forensics Iosif I. Androulidakis, 2016-03-22 This new edition provides both theoretical and practical background of security and forensics for mobile phones The author discusses confidentiality integrity and

availability threats in mobile telephones to provide background for the rest of the book Security and secrets of mobile phones are discussed including software and hardware interception fraud and other malicious techniques used against users The purpose of this book is to raise user awareness in regards to security and privacy threats present in the use of mobile phones while readers will also learn where forensics data reside in the mobile phone and the network and how to conduct a relevant analysis The information on denial of service attacks has been thoroughly updated for the new edition Also a major addition to this edition is a section discussing software defined radio and open source tools for mobile phones
