

## Student Exploration: Evolution: Mutation and Selection

**Directions:** Follow the instructions to go through the simulation. Respond to the questions and prompts in the orange boxes. Complete the lab Assessment

### **Define Each Vocabulary Word:**

**adaptation**-the biological mechanism by which organisms adjust to new environments or to changes in their current environment

**allele**-a variant form of a gene

**allele sequence**-the DNA sequences controlling our traits, are usually found in two copies in eukaryotic genomes

**chromosome**-a structure found inside the nucleus of a cell

**evolution**- the change in the characteristics of a species over several generations and relies on the process of natural selection

**fitness**-being able to live long enough to reproduce and keep the population or species alive

**gene**-the basic physical and functional unit of heredity

**genotype**- the genetic makeup of an organism

**mutation**-occurs when a DNA gene is damaged or changed in such a way as to alter the genetic message carried by that gene

**natural selection**-the process through which populations of living organisms adapt and change

**phenotype trait**- the observable physical properties of an organism

### **Prior Knowledge Questions** (Do these BEFORE using the Gizmo.)

1. Imagine a white lizard and a brown lizard sitting on a brown rock. A hawk is circling overhead hunting for its next meal. Which lizard do you think the hawk would most likely try to catch? Explain your choice.

The white lizard because it is more noticeable and sticks out more.

2. Now imagine that the same two lizards were sitting on a dune of white sand. Which lizard do you think the hawk would then most likely try to catch? Why?

The brown lizard because it doesn't blend in with the white sand.

### **Gizmo Warm-up**

How long could a parrot survive in Antarctica? It would probably not survive long. Parrots do not have **adaptations**—or helpful characteristics—to survive icy cold weather. Because of this, a parrot is not fit for Antarctica. **Fitness** describes how well an organism can survive and reproduce in an environment.

In the *Evolution: Mutation and Selection* Gizmo, you will see how a species' fitness can change over time as it becomes better adapted to its environment.

1. On the SIMULATION pane, what is the **Average fitness** of the population?

Hyman's Comparative Vertebrate Anatomy Libbie Henrietta Hyman,1992-09-15 The purpose of this book now in its third

edition is to introduce the morphology of vertebrates in a context that emphasizes a comparison of structure and of the function of structural units The comparative method involves the analysis of the history of structure in both developmental and evolutionary frameworks The nature of adaptation is the key to this analysis Adaptation of a species to its environment as revealed by its structure function and reproductive success is the product of mutation and natural selection the process of evolution The evolution of structure and function then is the theme of this book which presents system by system the evolution of structure and function of vertebrates Each chapter presents the major evolutionary trends of an organ system with instructions for laboratory exploration of these trends included so the student can integrate concept with example
