Water Ethics David Groenfeldt, 2019-02-21 Fully revised and updated this second edition of *Water Ethics* continues to consolidate water ethics as a key dimension of water related decisions. The book introduces the idea that ethics are an intrinsic dimension of any water policy program or practice and that understanding what ethics are being acted out in water policies is fundamental to an understanding of water resource management. Alongside updated references and the introduction of discussion questions and recommended further reading, this new edition discusses in depth three significant developments since the publication of the first edition in 2013. The first is the growing awareness of the climate crisis as an existential threat and associated concern about adaptive strategies for sustainable water management and ways of using water management for climate mitigation e.g. practically through agricultural soil management and conceptually through ethics awareness. Second, there has been increased clarity among the religious community, Indigenous leaders and progressive academics that ethics needs to become an arena for application and action e.g. the Vatican encyclical *Laudato Si*, protests at Standing Rock and Flint Michigan in the US and climate demonstrations worldwide. Thirdly, there have been new normative water standards ranging from water stewardship industry initiative water charters Berlin and the on going initiative to develop a global water ethics charter. Drawing on case studies from countries including Australia, India, the Philippines, South Africa and the United States, this textbook is essential reading for students of environmental ethics and water governance and management.

Civil Society in Investment Treaty Arbitration Farouk El-Hosseny, 2018-01-09 *Civil Society in Investment Treaty Arbitration: Status and Prospects* provides an overview of the evolution of civil society's participation as amicus curiae before ICSID tribunals and ad hoc tribunals applying the UNCITRAL Arbitration Rules. That evolution fits within a broader movement towards transparency in investment treaty arbitration. By looking at the procedural roles available to civil society before other jurisdictions, the book questions whether the amicus role could be expanded. El Hosseny ultimately shows how substance and procedure closely intertwine. The issue of civil society's participation in investment treaty arbitration transcends the procedural realm. It is equally about arbitral tribunals' openness vis vis public interest, environmental protection and human rights issues, a crucial consideration in ongoing debates over the legitimacy and future of investor state arbitration.

draws professional philosophers graduate students and undergraduates more deeply into the discussions that are happening outside of philosophy departments To that end the volume contains more nonphilosophers than philosophers explicitly inviting scholars from other fields such as animal science ecology economics psychology law environmental science and applied biology among others to bring their own disciplinary resources to bear on matters that affect animals The Routledge Handbook of Animal Ethics is composed of 44 chapters all appearing in print here for the first time and organized into the following six sections I Thinking About Animals II Animal Agriculture and Hunting III Animal Research and Genetic Engineering IV Companion Animals V Wild Animals Conservation Management and Ethics VI Animal Activism The chapters are brief and they have been written in a way that is accessible to serious undergraduate students regardless of their field of study The volume covers everything from animal cognition to the state of current fisheries from genetic modification to intersection animal activism It is a resource designed for anyone interested in the moral issues that emerge from human interactions with animals
