Introduction to Compiler Construction Thomas W. Parsons, 1992

Compiler Construction William M. Waite, Gerhard

Goos, 2012-12-06 Compilers and operating systems constitute the basic interfaces between a programmer and the machine

for which he is developing software In this book we are concerned with the construction of the former Our intent is to provide the reader with a firm theoretical basis for compiler construction and sound engineering principles for selecting alternate methods implementing them and integrating them into a reliable economically viable product The emphasis is upon a clean decomposition employing modules that can be re used for many compilers separation of concerns to facilitate team programming and flexibility to accommodate hardware and system constraints A reader should be able to understand the questions he must ask when designing a compiler for language X on machine Y what tradeoffs are possible and what performance might be obtained He should not feel that any part of the design rests on whim each decision must be based upon specific identifiable characteristics of the source and target languages or upon design goals of the compiler The vast majority of computer professionals will never write a compiler Nevertheless study of compiler technology provides important benefits for almost everyone in the field It focuses attention on the basic relationships between languages and machines Understanding of these relationships eases the inevitable transitions to new hardware and programming languages and improves a person's ability to make appropriate tradeoffs in design and implementation **Compiler Construction** Stefan

ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences This year it comprises five conferences FOSSACS FASE ESOP CC TACAS four satellite workshops CMCS AS WAGA CoFI seven invited lectures two invited tutorials and six contributed tutorials The events that comprise ETAPS address various aspects of the system development process including specification design implementation analysis and improvement The languages methodologies and tools which support these activities are all well within its scope Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive **Indian Books in Print**, 1984 Conference Record of the
