

ELEMENTS OF A GRID

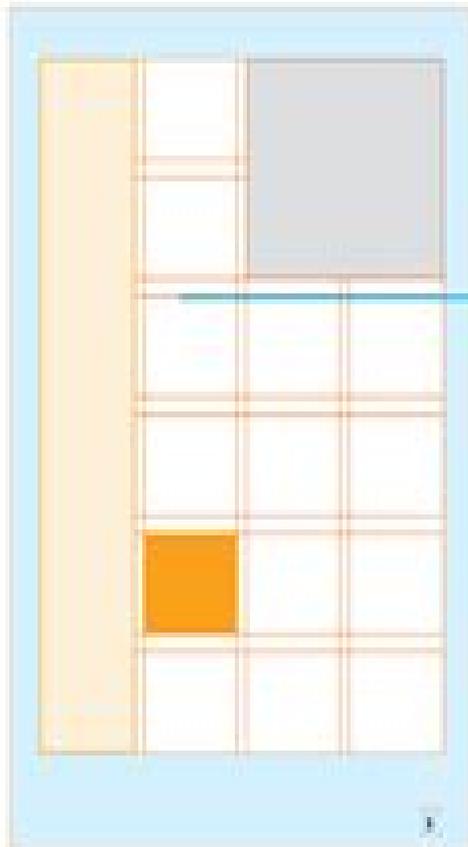

1. Know the Components

The main components of a grid are margins, columns, columns, headings, gutters, lines, and baselines. Starting with a page that is four pages wide and four pages high, let's see how you might use these elements to create a grid.

MARGINS are vertical columns that define the space between the text and the edges of the page. The width and number of margins on a page or across the entire spread are determined by the content.

MODULES are individual elements, typically, repeated across a grid. Consistent modules can create interest and ease of reading.

MARGINS are the space between the text and the edges of the page. The width and number of margins on a page or across the entire spread are determined by the content.

MARGINS are groups of columns or rows that are used to define the space between the text and the edges of the page.

BASELINES are elements that define the vertical position of the text. Baselines are created for each column and are used to align the text within a page.

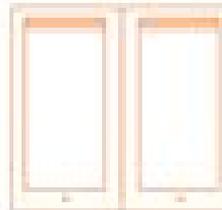

MARGINS are the space between the text and the edges of the page. The width and number of margins on a page or across the entire spread are determined by the content.

BASIC GRID DIAGRAMS

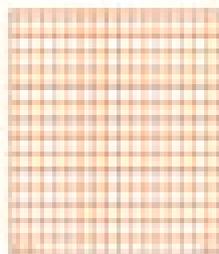

2. Learn the Basic Structures

Although the diagrams below show common structures, there are additional variations on the basic configurations. The illustrations guide the designer and help them select layout from columns to the margins.

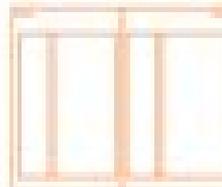

1 COLUMN GRID is a primary layout for content-heavy text and images. The width of the column is determined by the page width and the number of columns.

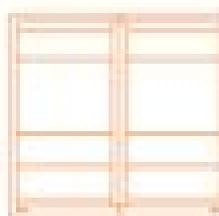

MARGINS are used to control the width of columns. The width and number of margins are determined by the content, the page width, and the number of columns. The margins are used to define the space between the text and the edges of the page.

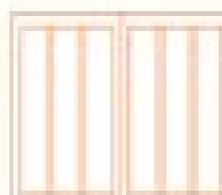

2 COLUMN GRID can be used to control the width of the content. A two-column grid can be created with columns of equal or unequal width. The width of the columns is determined by the page width and the number of columns.

MARGINS are used to control the width of columns. The width and number of margins are determined by the content, the page width, and the number of columns. The margins are used to define the space between the text and the edges of the page.

MULTI-COLUMN GRID can be used to control the width of the content. A multi-column grid can be created with columns of equal or unequal width. The width of the columns is determined by the page width and the number of columns.
