LIMS Richard Mahaffey, 2012-12-06 Computing and information management technologies touch our lives in the environments where we live play and work High tech is becoming the standard Those of use who work in a laboratory environment are faced with an obvious challenge How do we best apply these technologies to make money for our companies The first level of deliverable benefits is achieved through task automation The second level is obtained by integrating the individual islands of automation The third or top level of benefits is related to applying intelligence to computing applications The use of computing technology at level one to automate lab procedures methods and instruments has been profitable for many years We can easily find yearly returns in the range of 10 50% for investments at this level For level two the integration of some applications has evolved and has led to data management systems and local area networking in the lab environment Investment paybacks at level two are substantially higher in the range of 200 400% Examples of applications at the top level that of intelligent systems and applications are few and far between And what about the payback for investments at this level With such limited experience at level three we can only estimate the benefits But again they appear to be much higher in the range of 2000 4000%
