Sciences and Software Engineering      *Sensitivity Analysis for Neural Networks* Daniel S. Yeung, Ian Cloete, Daming Shi, Wing W. Y. Ng, 2009-11-09 Artificial neural networks are used to model systems that receive inputs and produce outputs. The relationships between the inputs and outputs and the representation parameters are critical issues in the design of related engineering systems and sensitivity analysis concerns methods for analyzing these relationships. Perturbations of neural networks are caused by machine imprecision and they can be simulated by embedding disturbances in the original inputs or connection weights allowing us to study the characteristics of a function under small perturbations of its parameters. This is the first book to present a systematic description of sensitivity analysis methods for artificial neural networks. It covers sensitivity analysis of multilayer perceptron neural networks and radial basis function neural networks, two widely used models in the machine learning field. The authors examine the applications of such analysis in tasks such as feature selection, sample reduction, and network optimization. The book will be useful for engineers applying neural network sensitivity analysis to solve practical problems and for researchers interested in foundational problems in neural networks.

**Neural Networks and Learning Machines** Simon S. Haykin, 2009 For graduate level neural network courses offered in the departments of Computer Engineering, Electrical Engineering, and Computer Science. Renowned for its thoroughness and readability, this well organized and completely up to date text remains the most comprehensive treatment of neural networks from an engineering perspective. Matlab codes used for the computer experiments in the text are available for download at <http://www.pearsonhighered.com/haykin>. Refocused, revised, and renamed to reflect the duality of neural networks and learning machines, this edition recognizes that the subject matter is richer when these topics are studied together. Ideas drawn from neural networks and machine learning are hybridized to perform improved learning tasks beyond the capability of either independently.      *Monthly Weather Review*, 1986      **Adaptive Filtering** Paulo S. R. Diniz, 2019-11-28 In the fifth edition of this textbook, author Paulo S. R. Diniz presents updated text on the basic concepts of adaptive signal processing and adaptive filtering. He first introduces the main classes of adaptive filtering algorithms in a unified framework using clear notations that facilitate actual implementation. Algorithms are described in tables which are detailed enough to allow the reader to verify the covered concepts. Examples address up to date problems drawn from actual applications. Several chapters are expanded and a new chapter, Kalman Filtering, is included. The book provides a concise background on adaptive filtering including the family of LMS, affine projection, RLS, set membership algorithms, and Kalman filters, as well as nonlinear sub-band blind IIR adaptive filtering and more. Problems are included at the end of chapters. A MATLAB package is provided so the reader can solve new problems and test algorithms. The book also offers easy access to working algorithms for practicing engineers.
