Books Applied Engineering Technology Program :

Applied Engineering Mechanics C. Poll,G. Boothroyd,2018-05-04 This is the more practical approach to engineering mechanics that deals mainly with two dimensional problems since these comprise the great majority of engineering situations and are the necessary foundation for good design practice The format developed for this textbook moreover has been devised to benefit from contemporary ideas of problem solving as an educational tool In both areas dealing with statics and dynamics theory is held apart from applications so that practical engineering problems which make use of basic theories in various combinations can be used to reinforce theory and demonstrate the workings of static and dynamic engineering situations In essence a traditional approach this book makes use of two dimensional engineering drawings rather than pictorial representations Word problems are included in the latter chapters to encourage the student's ability to use verbal and graphic skills interchangeably SI units are employed throughout the text This concise and economical presentation of engineering mechanics has been classroom tested and should prove to be a lively and challenging basic textbook for two semester courses for students in mechanical and civil engineering Applied Engineering Mechanics Statics and Dynamics is equally suitable for students in the second or third year of four year engineering technology programs Teaching and Collecting Technical Standards Chelsea Leachman,Erin M. Rowley,Margaret Phillips,Daniela Solomon,2023-09-15 Technical standards are a vital source of information for providing guidelines during the design manufacture testing and use of whole products materials and components To prepare students especially engineering students for the workforce universities are increasing the use of standards within the curriculum Employers believe it is important for recent university graduates to be familiar with standards Despite the critical role standards play within academia and the workforce little information is available on the development of standards information literacy which includes the ability to understand the standardization process identify types of standards and locate evaluate and use standards effectively Libraries and librarians are a critical part of standards education and much of the discussion has been focused on the curation of standards within libraries However librarians also have substantial experience in developing and teaching standards information literacy curriculum With the need for universities to develop a workforce that is well educated on the use of standards librarians and course instructors can apply their experiences in information literacy toward teaching students the knowledge and skills regarding standards that they will need to be successful in their field This title provides background information for librarians on technical standards as well as collection development best practices It also creates a model for librarians and course instructors to use when building a standards information literacy curriculum **Math Problems in Water and Wastewater** Subhash Verma,2024-11-29 This book covers the fundamental concepts required to solve typical problems in water and wastewater engineering Water professionals working in the industry require a license to work in water plants and Math Problems in Water and Wastewater aids readers in preparing for the mathematics portion of these exams It lays a

sound foundation that not only helps with the certification examination but also helps water operators in performing their daily activities The basic concepts and volumes of various unit devices followed by specific problems in water and water treatment are presented through solved example problems Includes examples both in Imperial and SI units throughout Covers common and specific topics both for water and wastewater operations All calculations shown with unit cancellation All example problems are followed by practice problems Examples include problems suitable for all level of certification A brief description of the water and wastewater treatment is given
