Parallel Computational Fluid Dynamics 2008 Damien Tromeur-Dervout, Gunther Brenner, David R. Emerson, Jocelyne Erhel, 2010-09-21 This book collects the proceedings of the Parallel Computational Fluid Dynamics 2008 conference held in Lyon France. Contributed papers by over 40 researchers representing the state of the art in parallel CFD and architecture from Asia, Europe, and North America examine major developments in: 1) block structured grid and boundary methods to simulate flows over moving bodies; 2) specific methods for optimization in Aerodynamics Design; 3) innovative parallel algorithms and numerical solvers such as scalable algebraic multilevel preconditioners and the acceleration of iterative solutions; 4) software frameworks and component architectures for parallelism; 5) large scale computing and parallel efficiencies in the industrial context; 6) lattice Boltzmann and SPH methods; and 7) applications in the environment, biofluids, and nuclear engineering.

Innovations in Solar Thermal Energy Mohsen Sheikholeslami, 2025-12-04 Innovations in Solar Thermal Energy: Techniques to Enhance Photovoltaic Thermal System Efficiency delves into the transformative potential of solar thermal energy as a pivotal solution to modern energy challenges. The book provides a comprehensive exploration of state-of-the-art advancements, strategies, and innovations in photovoltaic thermal (PVT) systems, with a focus on improving their efficiency and sustainability. From understanding the principles behind solar harnessing to addressing practical challenges in system integration, the text serves as an essential resource for researchers, engineers, and energy enthusiasts aiming to revolutionize renewable energy technologies and contribute to a sustainable future through optimized solar solutions. Beyond its technical insights, the book also addresses broader applications, including innovative design techniques, economic implications, and emerging technologies in the field. With clear illustrations and case studies, it offers actionable knowledge for both academic and industrial professionals. Synthesizes and analyzes the latest advances in nanofluid applications, cooling techniques, materials, design, and more. Provides practical coverage with mathematical models, real-world applications, and environmental and economic analyses. Includes state-of-the-art technologies in hydrogen production, floating photovoltaics systems, and building applications.

Three-dimensional Flow in Cavity at Yaw Alex Povitsky, 2001 This study is motivated by three-dimensional flows about protrusions and cavities with an arbitrary angle between the external flow and rigid elements. The novel type of a building block cavity flow is proposed where the cavity lid moves along its diagonal. Case A: The proposed case is taken as a typical representative of essentially three-dimensional highly separated vortical flows having simple single-block rectangular geometry of computational domain. Computational results are compared to the previous studies where the lid moves parallel to the cavity side walls. Case B: These 3-D lid-driven cavity flows are studied by numerical modeling using second-order upwind schemes for convective terms. The volume and plane integrals of primary and transversal momentum are introduced to compare cases in a quantitative way. For the laminar flow in the cubic cavity, the integral momentum of the secondary flow, which is perpendicular to the lid direction, is about an order of magnitude larger than that in Case B. In Case A

the number of secondary vortices substantially depends on the Re number The secondary vortices in the central part of the cavity in Case A distinguishes it from Case B where only corner secondary vortices appear For a rectangular 3 D 3 1 1 cavity the integral momentum of the secondary flow in Case A is an order of magnitude larger than that in the benchmark cases The flow field in Case A includes a curvilinear separation line and non symmetrical vortices which are discussed in the paper The estimated Goertler number is approximately 4 5 times larger in Case A than that in Case B for the same Re number This indicates that in Case A the flow becomes unsteady for smaller Re numbers than in Case B For developed turbulent flow in the cubic cavity the yaw effect on amplification of secondary flow is as strong as that for the laminar flow despite the more complex vortical flow pattern in benchmark case B

**10th European Conference on Mixing** Harry E.A. Van den Akker,J.J. Derksen,2000-06-14 Traditionally fluid mixing and the related multiphase contacting processes have always been regarded as an empirical technology Many aspects of mixing dispersing and contacting were related to power draw but understanding of the phenomena was limited or qualitative at the most In particular during the last decade however plant operation targets have tightened and product specifications have become stricter The public awareness as to safety and environmental hygiene has increased The drive towards larger degrees of sustainability in the process industries has urged for lower amounts of solvents and for higher yields and higher selectivities in chemical reactors All this has resulted in a market pull the need for more detailed insights in flow phenomena and processes and for better verifiable design and operation methods Developments in miniaturisation of sensors and circuits as well as in computer technology have rendered leaps possible in computer simulation and animation and in measuring and monitoring techniques This volume encourages a leap forward in the field of mixing by the current overwhelming wealth of sophisticated measuring and computational techniques This leap may be made possible by modern instrumentation signal and data analysis field reconstruction algorithms computational modelling techniques and numerical recipes
