A multinomial logistic regression analysis was conducted to examine the relationship between Brand Preference (Apple, Samsung, Other) and the predictor variables Age, Price, and Gender. The model was statistically significant, indicating that it was able to distinguish effectively between the brands based on the predictor variables $\chi^2(6) = 67.29$, $p < .001$. For Brand Preference of Apple compared to Other, Age and Price were significant predictors. Each year increase in Age was associated with a decrease in the likelihood of preferring Apple over Other ($B = -.20$, $p < .001$, 95% CI [.74, .91]). Each unit increase in Price was associated with a slight increase in the likelihood of preferring Apple ($B = .013$, $p < .001$, 95% CI [1.00, 1.02]). Gender was not a significant predictor in this comparison. In the comparison between Samsung and Other, both Age and Price were again significant predictors. Each year increase in Age was associated with a decrease in the likelihood of preferring Samsung ($B = -.13$, $p = .003$, 95% CI [.80, .96]). Each unit increase in Price was associated with a slight increase in the likelihood of preferring Samsung ($B = .01$, $p = .001$, 95% CI [1.005, 1.017]). Gender did not significantly predict preference for Samsung over Other.

the problem of multi class linear classification and feature selection we propose new approximate message passing algorithms based on Hybrid Generalized Approximate Message Passing Hybrid GAMP to train a multinomial logistic regression model We propose both maximum a posteriori MAP and approximate minimum mean square error MMSE estimators of the weight vectors Then we design simplified variants of these algorithms that lead to significantly faster runtimes and improved numerical robustness Our algorithms are able to handle the case where the number of features far exceeds the number of training examples through the use of sparsity promoting prior distributions on the weight vectors Additionally our algorithms are able to take advantage of existing expectation maximization EM and Stein s Unbiased Risk Estimate SURE methods to tune their parameters online Finally we demonstrate our algorithms performance on both synthetic and real datasets   Logistic Regression Using SAS(R) Paul Allison,2018-07-20 If you are a researcher or student with experience in multiple linear regression and want to learn about logistic regression Paul Allison s Logistic Regression Using SAS Theory and Application Second Edition is for you Informal and nontechnical this book both explains the theory behind logistic regression and looks at all the practical details involved in its implementation using SAS Several real world examples are included in full detail This book also explains the differences and similarities among the many generalizations of the logistic regression model The following topics are covered binary logistic regression logit analysis of contingency tables multinomial logit analysis ordered logit analysis discrete choice analysis and Poisson regression Other highlights include discussions on how to use the GENMOD procedure to do loglinear analysis and GEE estimation for longitudinal binary data Only basic knowledge of the SAS DATA step is assumed The second edition describes many new features of PROC LOGISTIC including conditional logistic regression exact logistic regression generalized logit models ROC curves the ODDSRATIO statement for analyzing interactions and the EFFECTPLOT statement for graphing nonlinear effects Also new is coverage of PROC SURVEYLOGISTIC for complex samples PROC GLIMMIX for generalized linear mixed models PROC QLIM for selection models and heterogeneous logit models and PROC MDC for advanced discrete choice models This book is part of the SAS Press program
