

SQL

vs

SQLite

#1. Definition

SQL (Structured Query Language) is used for database operation. This system belongs to Relational Database Systems. The SQL language is written in the C coding language.

SQLite is based on an ANSI-C Relational Database Management System.

#2. Operation

SQL defines how relational schema is creating, inserting, or updating data in relationships. It helps to start transaction and finish it, and so on data-related functionalities.

SQLite is based on the file databases for development called file-based databases. SQLite is not similar to the other databases. It does not include a special server process.

#3. Component

SQL includes main components such as a Data Manipulation Language, Data Definition Language, and Data Control Language.

SQLite supports high-performance functionality and many SQL features, but it does not assist stored procedures.

#4. Uses

A structured Query language is used to operate different databases such as Microsoft SQL Server, Oracle, MySQL and others.

SQLite is a lightweight database resource. It could be extended in whatever programming language is used to access the database.

#5. Functionality

A traditional SQL database must be running as a service in order to connect to and provide a variety of functionalities.

SQLite database system does connect to and provide a variety of functionalities.

#6. Key Point

SQL is not the database. It is a database query language that is worked for databases.

SQLite function is a relational database management system that works SQL.

#7. Case Studies

SQL uses an explicit schema that shows the relationship between different tables, making it ideal for user-oriented applications. Ensures compatibility and establishes ACID properties as well.

SQLite uses for the internet of things and other devices. It is suited for websites with low to medium traffic. Large datasets can be analyzed using the sqlite3 command-line shell.
