

General Psychology Notes - Memory

I. Basic Memory Processes:

A. Encoding - change information into a form that the memory system uses

B. Storage - maintaining information over a period of time

C. Retrieval - locating information being stored in memory and bringing into awareness

II. Three Memory Systems

- **Sensory Memory** - sensory inputs are briefly held for approximately 1/2 - 2 seconds in sensory registers. Information is encoded/processed and transferred into short-term memory or decays and is lost forever.
 1. Icon - visual memory and lasts for approximately 1/2 second
 2. Echo - auditory memory and lasts for approximately 2 seconds
 3. De ja vu' - memory theorists believe this is caused by a short circuit in sensory memory and the information is being reprocessed which is what gives you that uncanny feeling that you have experienced something before. You have, only a few seconds ago.
- **Short term Memory** - also referred to as working information
 1. Information stays here for approximately 18-30 seconds.
 2. Limited capacity - 7 items + or -2 (5-9 items).
 3. Helps you think & solve problems by organizing and integrating information.
 4. Strategies can be used to help increase short-term capacity and duration of time.
Chunking - organizing several bits of information into one piece
Ex: area codes and exchanges of phone numbers
Maintenance Rehearsal - rote repetition over and over again
Elaborative Rehearsal - associate new information & existing knowledge
- **Long-term Memory** - Storage of Information Indefinitely
 1. Theoretically has an unlimited capacity
 2. 3 types
 - * Semantic memories - general knowledge, facts, and concepts
 - * Procedural memories - how to do something
 - * Episodic memories - personally relevant experiences

III. Biological Bases of Memory

1. Short-term memory involves changes in the neurochemistry

* increased synaptic responsiveness

* Neurotransmitters directly involved - glutamate & acetylcholine

2. Long-term memory - involves structural changes in the dendrite

* 2 week consolidation/stabilization period before memory becomes permanent

General Psychology H. K. Moore, 1948 **Memory's Library** Jennifer Summit, 2008-11-15 In Jennifer Summit's account libraries are more than inert storehouses of written tradition they are volatile spaces that actively shape the meanings and uses of books reading and the past Considering the two hundred year period between 1431 which saw the foundation of Duke Humfrey's famous library and 1631 when the great antiquarian Sir Robert Cotton died Memory's Library revises the history of the modern library by focusing on its origins in medieval and early modern England Summit argues that the medieval sources that survive in English collections are the product of a Reformation and post Reformation struggle to redefine the past by redefining the cultural place function and identity of libraries By establishing the intellectual dynamism of English libraries during this crucial period of their development Memory's Library demonstrates how much current discussions about the future of libraries can gain by reexamining their past
