Crassidis, John L. Junkins, 2011-10-26 Optimal Estimation of Dynamic Systems Second Edition highlights the importance of both physical and numerical modeling in solving dynamics based estimation problems found in engineering systems Accessible to engineering students applied mathematicians and practicing engineers the text presents the central concepts and methods of optimal estimation theory and applies the methods to problems with varying degrees of analytical and numerical difficulty Different approaches are often compared to show their absolute and relative utility The authors also offer prototype algorithms to stimulate the development and proper use of efficient computer programs MATLAB codes for the examples are available on the book's website New to the Second Edition With more than 100 pages of new material this reorganized edition expands upon the best selling original to include comprehensive developments and updates It incorporates new theoretical results an entirely new chapter on advanced sequential state estimation and additional examples and exercises An ideal self study guide for practicing engineers as well as senior undergraduate and beginning graduate students the book introduces the fundamentals of estimation and helps newcomers to understand the relationships between the estimation and modeling of dynamical systems It also illustrates the application of the theory to real world situations such as spacecraft attitude determination GPS navigation orbit determination and aircraft tracking Zeroing Dynamics, Gradient Dynamics, and Newton Iterations Yunong Zhang, Lin Xiao, Zhengli Xiao, Mingzhi Mao, 2018-10-09 Neural networks and neural dynamics are powerful approaches for the online solution of mathematical problems arising in many areas of science engineering and business Compared with conventional gradient neural networks that only deal with static problems of constant coefficient matrices and vectors the authors new method called zeroing dynamics solves time varying problems Zeroing Dynamics Gradient Dynamics and Newton Iterations is the first book that shows how to accurately and efficiently solve time varying problems in real time or online using continuous or discrete time zeroing dynamics The book

brings together research in the developing fields of neural networks neural dynamics computer mathematics numerical algorithms time varying computation and optimization simulation and modeling analog and digital hardware and fractals The authors provide a comprehensive treatment of the theory of both static and dynamic neural networks Readers will discover how novel theoretical results have been successfully applied to many practical problems The authors develop analyze model simulate and compare zeroing dynamics models for the online solution of numerous time varying problems such as root finding nonlinear equation solving matrix inversion matrix square root finding quadratic optimization and inequality solving
