Integrated Energy Systems for Multigeneration Ibrahim Dincer, Dr. Yusuf Bicer, 2019-09-13 *Integrated Energy Systems for Multigeneration* looks at how measures implemented to limit greenhouse gas emissions must consider smart utilization of available limited resources and employ renewable resources through integrated energy systems and the utilization of waste energy streams This reference considers the main concepts of thermal and conventional energy systems through detailed systems description analyses of methodologies performance assessment and optimization and illustrative examples and case studies The book examines producing power and heat with cooling freshwater green fuels and other useful commodities designed to tackle rising greenhouse gas emissions in the atmosphere With worldwide energy demand increasing and the consequences of meeting supply with current dependency on fossil fuels investigating and developing sustainable alternatives to the conventional energy systems is a growing concern for global stakeholders Analyzes the links between clean energy technologies and achieving sustainable development Illustrates several examples of design and analysis of integrated energy systems Discusses performance assessment and optimization Uses illustrative examples and global case studies to explain methodologies and concepts

23 European Symposium on Computer Aided Process Engineering M. Gądek, R. Kubica, E. Jędrzyk, 2013-06-10 Increasing awareness of the environmental issues forces a strong drive towards the development of new sustainable processes for renewable energy production Likewise the economic issues

related to the increasing prices of crude oil and its derivatives lead to the recognition of advantages of alternative fuels thus a significant interest in biomass derived synthetic fuels is observed Among various thermo chemical conversion processes biomass gasification is one of the most effective efficient and sustainable solutions to the production of renewable energy It provides a gaseous fuel composed mainly of carbon monoxide and hydrogen suitable to produce chemicals heat and energy In particular syngas can be used to obtain methanol MeOH and dimethyl ether DME both energy carriers of great interest for many advanced energy applications The herein presented work provides the reader with a comparison of the technicalities as well as economics of methanol and DME production from biomass derived syngas by different pathways For that purpose a process simulation by means of the ChemCAD commercial code was used The developed simulation strategies include both optimization of the kinetic models and unique solution of fuel refinement

13th International Colloquium Fuels Nicolai Schubert,2021-11-08 With the signing of the Paris Agreement in December 2015 the United Nations explained their willingness to limit the GHG Emissions and contribute to the measures against the global warming effect In 2019 the European Commission proposed the Green Deal and as a consequence the target to be climate neutral in 2050 In consequence the fossil based energy system has to transform into a climate neutral energy system with renewable and sustainable energy carriers Research on and development of alternative fuels and new production processes are ongoing to provide the technical solution Political actions are needed to provide the economic framework for the introduction of such alternative fuel solutions The fulfilment of the European CO2 reduction targets until 2050 needs realistic technical solutions including backwards compatible approaches for existing vehicle fleets An economic and sustainable development towards climate neutral mobility requires a holistic view based on life cycle assessments for the different mobility approaches including the economic impacts as well as financing options A synergetic discussion of solutions for future fuels and powertrain technologies is needed to develop an economic pathway to a sustainable and affordable mobility of tomorrow The challenging goal for mobility can only be achieved through an international cooperation of universities the automobile industry energy producers the oil industry and the legislative bodies of the member states The international colloquium aims to contribute to the development of a climate neutral mobility by exchanging views on and discussing all aspects connected with the powertrain fuel environment system including the necessary political regulations

Analysis, Synthesis, and Design of Chemical Processes Richard Turton, 2012. Process design is the focal point of chemical engineering practice: the creative activity through which engineers continuously improve facility operations to create products that enhance life. Effective chemical engineering design requires students to integrate a broad spectrum of knowledge and intellectual skills so they can analyze both the big picture and minute details and know when to focus on each. Through three previous editions, this book has established itself as the leading resource for students seeking to apply what they've learned in real-world open-ended process problems. The authors help students hone and synthesize their design skills through expert coverage of preliminary equipment sizing, flowsheet optimization, economic evaluation, operation and control simulation, and other key topics. This new Fourth Edition is extensively updated to reflect new technologies, simulation techniques, and process control strategies and to include new pedagogical features, including concise summaries and end-of-chapter lists of skills and knowledge.
