Measurement and Evaluation for Health Educators Manoj Sharma, Rick Lingyak Petosa, 2014 Measurement and Evaluation for Health Educators prepares health educators for the responsibilities of conducting evaluations within their field. It includes psychometric, statistical, political, managerial, and public health perspectives to measurement and evaluation. Written for the undergraduate or beginning graduate student as well as practicing professions, this text will help readers choose and develop instruments for evaluation and discusses the basics for carrying out evaluations to gauge the effectiveness of health education and health promotion programs. Measurement and Evaluation for Health Educators also delves into the basics of measurement steps in instrument development, reliability assessment, validity assessment, measurement errors, process evaluation, designs for quantitative evaluation, and much more. Key Features: Student friendly, accessible writing style. Each chapter closes with review questions and web references. Chapter objectives and key learning objectives are clearly defined. Includes skill building activities in every chapter. Boxed articles throughout the text highlight important issues in the field.

Using Research Instruments David Wilkinson, Peter Birmingham, 2003 This practical, jargon-free, user-friendly guide to the most appropriate use of research instruments provides real examples used in actual projects by practitioners of social and educational research.

Future Earth Diana Dalbotten, Gillian Roehrig, Patrick Hamilton, 2014-06-23 Earth now is dominated by both biogeophysical and anthropogenic processes as represented in these two images from a simulation of aerosols. Dust (red) from the Sahara sweeps west across the Atlantic Ocean. Sea salt (blue) rises into the atmosphere from winds over the North Atlantic and from a tropical cyclone in the Indian Ocean. Organic and black carbon (green) from biomass burning is notable over the Amazon and Southeast Asia. Plumes of sulfate (white) from fossil fuel burning are particularly prominent over northeastern North America and East Asia. If present trends of dust emissions and fossil fuel burning continue in what we call the Anthropocene epoch, then we could experience high atmospheric CO₂ levels leading to unusual warming rarely experienced in Earth's history. This book focuses on human influences on land, ocean, and the atmosphere to determine if human activities are operating within or beyond the safe zones of our planet's biological, chemical, and physical systems. Volume highlights include: Assessment of civic understanding of Earth and its future; Understanding the role of undergraduate geoscience research and community-driven research on the Anthropocene; Effective communication of science to a broader audience that would include the public, the K-12 science community, or populations underrepresented in the sciences; Public outreach on climate education, geoscience alliance, and scientific reasoning. Future Earth is a valuable practical guide for scientists from all disciplines, including geoscientists, museum curators, science educators, and public policy makers.
