Balagurusamy, B. Sushila, 1990 **Interacting Processes** Nissim Francez, Ira R. Forman, 1996 In response to the industry s need for coordination this book represents an approach to the design of coordinated distributed programs based on a high level language IP This book appeals to theoretical computer scientists who are interested in the application of formal methods to distributed programs and software engineers who adopt an algorithmic approach when they develop software for distributed systems **Distributed Systems** Andrew S. Tanenbaum, Maarten van Steen, 2002 Based on the formula of Tanenbaum s Distributed Operating Systems this text covers seven key principles of distributed systems communications processes naming synchronization consistency and replication fault tolerance and security **Distributed Systems** Mack W. Alford, 1985 **Introduction to Reliable and Secure Distributed Programming** Christian Cachin, Rachid Guerraoui, Luís Rodrigues, 2011-02-11 In modern computing a program is usually distributed among several processes The fundamental challenge when developing reliable and secure distributed programs is to support the cooperation of processes required to execute a common task even when some of these processes fail Failures may range from crashes to adversarial attacks by malicious processes Cachin Guerraoui and Rodrigues present an introductory description of fundamental distributed programming abstractions together with algorithms to implement them in distributed systems where processes are subject to crashes and malicious attacks The authors follow an incremental approach by first introducing basic abstractions in simple distributed environments before moving to more sophisticated abstractions and more challenging environments Each core chapter is devoted to one topic covering reliable broadcast shared memory consensus and

extensions of consensus For every topic many exercises and their solutions enhance the understanding This book represents the second edition of Introduction to Reliable Distributed Programming Its scope has been extended to include security against malicious actions by non cooperating processes This important domain has become widely known under the name Byzantine fault tolerance **American Book Publishing Record** ,2006 *Performance of Distributed Systems and Integrated Communication Networks* Toshiharu Hasegawa,Hideaki Takagi,Yutaka Takahashi,1992 This book explores new analytical techniques and tools for the performance evaluation of distributed and integrated computer communication systems The systems considered are those arising in LAN MAN WAN broadband ISDN and ATM switching These systems are mathematically modelled and analysed Analytical results are presented on the basic queueing models such as multi queue priority queue queueing network queue with bursty input and superposed input and multi server queue These results can be usefully applied for the performance evaluation of all the above systems **Documentation Abstracts** ,1995 The British National Bibliography Arthur James Wells,2007 APMR ,2006 **Proceedings** ,1985 Advances in Distributed Systems Sacha Krakowiak,Santosh Shrivastava,2003-06-26 In 1992 we initiated a research project on large scale distributed computing systems LSDCS It was a collaborative project involving research institutes and universities in Bologna Grenoble Lausanne Lisbon Rennes Rocquencourt Newcastle and Twente The World Wide Web had recently been developed at CERN but its use was not yet as common place as it is today and graphical browsers had yet to be developed It was clear to us and to just about everyone else that LSDCS comprising several thousands to millions of individual computer systems nodes would be coming into existence as a consequence both of technological advances and the demands placed by applications We were excited about the problems of building large distributed systems and felt that serious rethinking of many of the existing computational paradigms algorithms and structuring principles for distributed computing was called for In our research proposal we summarized the problem domain as follows We expect LSDCS to exhibit great diversity of node and communications capability Nodes will range from mobile laptop computers workstations to supercomputers Whereas mobile computers may well have unreliable low bandwidth communications to the rest of the system other parts of the system may well possess high bandwidth communications capability To appreciate the problems posed by the sheer scale of a system comprising thousands of nodes we observe that such systems will be rarely functioning in their entirety
