Advanced Autonomous Vehicle Design For Severe Environments:

Advanced Autonomous Vehicle Design for Severe Environments V.V. Vantsevich, M.V. Blundell, 2015-10-20 Classical vehicle dynamics which is the basis for manned ground vehicle design has exhausted its potential for providing novel design concepts to a large degree. At the same time unmanned ground vehicle UGV dynamics is still in its infancy and is currently being developed using general analytical dynamics principles with very little input from actual vehicle dynamics theory. This technical book presents outcomes from the NATO Advanced Study Institute ASI Advanced Autonomous Vehicle Design for Severe Environments held in Coventry UK in July 2014. The ASI provided a platform for world class professionals to meet and discuss leading edge research engineering accomplishments and future trends in manned and unmanned ground vehicle dynamics, terrain mobility and energy efficiency. The outcomes of this collective effort serve as an analytical foundation for autonomous vehicle design. Topics covered include historical aspects, pivotal accomplishments and the analysis of future trends in on and off road manned and unmanned vehicle dynamics, terramechanics, soil dynamic characteristics, uncertainties and stochastic characteristics of vehicle environment interaction for agile vehicle dynamics modeling, new methods and techniques in on line control and learning for vehicle autonomy, fundamentals of agility and severe environments, mechatronics and cyber physics issues of agile vehicle dynamics to design for control energy harvesting and cyber security and case studies of agile and inverse vehicle dynamics and vehicle systems design including optimisation of suspension and driveline systems. The book targets graduate students who desire to advance further in leading edge vehicle dynamics topics in manned and unmanned ground vehicles, PhD students continuing their research work and building advanced curricula in academia and industry and researchers in government agencies and private companies. [Control Applications of Vehicle Dynamics](#) Jingsheng Yu, Vladimir Vantsevich, 2021-12-24 This book presents essential knowledge of car vehicle dynamics and control theory with NI LabVIEW software product application resulting in a practical yet highly technical guide for designing advanced vehicle dynamics and vehicle system controllers. Presenting a clear overview of fundamental vehicle dynamics and vehicle system mathematical models, the book covers linear and non linear design of model based controls such as wheel slip control, vehicle speed control, path following control, vehicle stability and rollover control, stabilization of vehicle trailer system. Specific applications to autonomous vehicles are described among the methods. It details the practical applications of Kalman, Bucy filtering and the observer design for sensor signal estimation alongside lateral vehicle dynamics and vehicle rollover dynamics. The book also discusses high level controllers alongside a clear explanation of basic control principles for regenerative braking in both electric and hybrid vehicles and wheel torque vectoring systems. Concrete LabVIEW simulation examples of how the models and controls are used in representative applications along with software algorithms and LabVIEW block diagrams are illustrated. It will be of interest to engineering students, automotive engineering students and automotive engineers and researchers. *Internet of Things and Connected Technologies* Rajiv Misra, Nishtha

Kesswani, Muttukrishnan Rajarajan, Veeravalli Bharadwaj, Ashok Patel, 2021-05-29 This book presents the recent research adoption of a variety of enabling wireless communication technologies like RFID tags BLE ZigBee etc and embedded sensor and actuator nodes and various protocols like CoAP MQTT DNS etc that has made Internet of things IoT to step out of its infancy to become smart things Now smart sensors can collaborate directly with the machine without human involvement to automate decision making or to control a task Smart technologies including green electronics green radios fuzzy neural approaches and intelligent signal processing techniques play important roles in the developments of the wearable healthcare systems In the proceedings of 5th International Conference on Internet of Things and Connected Technologies ICIoTCT 2020 brought out research works on the advances in the Internet of things IoT and connected technologies various protocols standards etc This conference aimed at providing a forum to discuss the recent advances in enabling technologies and applications for IoT
