### **Optimal Trajectory Planning and Train Scheduling for Urban Rail Transit Systems**

Yihui Wang, Bin Ning, Ton van den Boom, Bart De Schutter, 2016-04-21 This book contributes to making urban rail transport fast punctual and energy efficient significant factors in the importance of public transportation systems to economic environmental and social requirements at both municipal and national levels It proposes new methods for shortening passenger travel times and for reducing energy consumption addressing two major topics 1 train trajectory planning the authors derive a nonlinear model for the operation of trains and present several approaches for calculating optimal and energy efficient trajectories within a given schedule and 2 train scheduling the authors develop a train scheduling model for urban rail systems and optimization approaches with which to balance total passenger travel time with energy efficiency and other costs to the operator Mixed integer linear programming and pseudospectral methods are among the new methods proposed for single and multi train systems for the solution of the nonlinear trajectory planning problem which involves constraints such as varying speed restrictions and maximum traction braking force Signaling systems and their effects are

also accounted for in the trajectory planning model Origin destination passenger demand is included in the model formulation for train scheduling Iterative convex programming and efficient bi level approaches are utilized in the solution of the train scheduling problem In addition the splitting rates and route choices of passengers are also optimized from the system point of view The problems and solutions described in Optimal Trajectory Planning and Train Scheduling for Urban Rail Transit Systems will interest researchers studying public transport systems and logistics whether from an academic or practitioner background as well as providing a real application for anybody studying optimization theory and predictive control

Toscano,2024-03-21 This text focuses on simple and easy to use design strategies for solving complex engineering problems that arise in several fields of engineering design namely non convex optimization problems The main optimization tool used in this book to tackle the problem of nonconvexity is the Heuristic Kalman Algorithm HKA The main characteristic of HKA is the use of a stochastic search mechanism to solve a given optimization problem From a computational point of view the use of a stochastic search procedure appears essential for dealing with non convex problems The topics discussed in this monograph include basic definitions and concepts from the classical optimization theory the notion of the acceptable solution machine learning the concept of preventive maintenance and more The Heuristic Kalman Algorithm discussed in this book applies to many fields such as robust structured control electrical engineering mechanical engineering machine learning

reliability and preference models This large coverage of practical optimization problems makes this text very useful to those working on and researching systems design The intended audience includes industrial engineers postgraduates and final year undergraduates in various fields of systems design Advances in Design Automation, 1988 S.
