Wertz, Wiley Larson, 1991-03-31 The goal of this book is to allow you to begin with a blank sheet of paper and design a space mission to meet a set of broad often poorly defined objectives You should be able to define the mission in sufficient detail to identify principal drivers and make a preliminary assessment of overall performance size cost and risk The emphasis of the book is on low Earth orbit unmanned spacecraft However we hope that the principles are broad enough to be applicable to other missions as well We intend the book to be a practical guide rather than a theoretical treatise As much as possible we have provided rules of thumb empirical formulas and design algorithms based on past experience We assume that the reader has a general knowledge of physics math and basic engineering but is not necessarily familiar with any aspect of space technology This book was written by a group of senior engineers with over 800 years of collective space experience It reflects the insight gained from this practical

experience and suggests how things might be done better in the future From time to time the views of authors and editors conflict as must necessarily occur given the broad diversity of experience We believe it is important to reflect this diversity rather than suppress the opinions of individual authors *Government reports annual index ,199?* **Area Array**
