**Classical Analogies in the Solution of Quantum Many-Body Problems** Aydın Cem Keser, 2018-11-07 This book addresses problems in three main developments in modern condensed matter physics namely topological superconductivity many body localization and strongly interacting condensates superfluids by employing fruitful analogies from classical mechanics This strategy has led to tangible results firstly in superconducting nanowires the density of states a smoking gun for the long sought Majorana zero mode is calculated effortlessly by mapping the problem to a textbook level classical point particle problem Secondly in localization theory even the simplest toy models that exhibit many body localization are mathematically cumbersome and results rely on simulations that are limited by computational power In this book an alternative viewpoint is developed by describing many body localization in terms of quantum rotors that have incommensurate rotation frequencies an exactly solvable system Finally the fluctuations in a strongly interacting Bose condensate and superfluid a notoriously difficult system to analyze from first principles are shown to mimic stochastic fluctuations of space time due to quantum fields This analogy not only allows for the computation of physical properties of the fluctuations in an elegant way it sheds light on the nature of space time The book will be a valuable contribution for its unifying style that illuminates conceptually challenging developments in condensed matter physics and its use of elegant mathematical models in addition to producing new and concrete results

**Statistical Mechanics** R.K. Pathria, Paul D. Beale, 2021-03-15 Statistical Mechanics Fourth Edition explores the physical properties of matter based on the dynamic behavior of its microscopic constituents This valuable textbook introduces the reader to the historical context of the subject before delving deeper into chapters about thermodynamics ensemble theory simple gases theory Ideal Bose and Fermi systems statistical mechanics of interacting systems phase transitions and computer simulations In the latest revision the book's authors have updated the content throughout including new coverage on biophysical applications updated exercises and computer simulations This updated edition will be an indispensable to students and researchers of statistical mechanics thermodynamics and physics Retains the valuable organization and trusted coverage of previous market leading editions Includes new coverage on biophysical applications and computer simulations Offers Mathematica files for student use and a secure solutions manual for qualified instructors Covers Bose Einstein condensation in atomic gases Thermodynamics of the early universe Computer simulations Monte Carlo and molecular dynamics Correlation functions and scattering Fluctuation dissipation theorem and the dynamical structure factor and much more

**Compendium of Theoretical Physics** Armin Wachter, Henning Hoerber, 2005-12-08 The Compendium of Theoretical Physics contains the canonical curriculum of theoretical physics From classical mechanics over electrodynamics quantum mechanics and statistical physics thermodynamics all topics are treated axiomatic deductively and confirmed by exercises solutions and short summaries

Thermal Physics Robert Floyd Sekerka, 2015-08-19 In Thermal Physics Thermodynamics and Statistical Mechanics for

Scientists and Engineers the fundamental laws of thermodynamics are stated precisely as postulates and subsequently connected to historical context and developed mathematically These laws are applied systematically to topics such as phase equilibria chemical reactions external forces fluid fluid surfaces and interfaces and anisotropic crystal fluid interfaces Statistical mechanics is presented in the context of information theory to quantify entropy followed by development of the most important ensembles microcanonical canonical and grand canonical A unified treatment of ideal classical Fermi and Bose gases is presented including Bose condensation degenerate Fermi gases and classical gases with internal structure Additional topics include paramagnetism adsorption on dilute sites point defects in crystals thermal aspects of intrinsic and extrinsic semiconductors density matrix formalism the Ising model and an introduction to Monte Carlo simulation Throughout the book problems are posed and solved to illustrate specific results and problem solving techniques Includes applications of interest to physicists physical chemists and materials scientists as well as materials chemical and mechanical engineers Suitable as a textbook for advanced undergraduates graduate students and practicing researchers Develops content systematically with increasing order of complexity Self contained including nine appendices to handle necessary background and technical details

**Memory Functions, Projection Operators, and the Defect Technique** V. M.

(Nitant) Kenkre, 2021-04-13 This book provides a graduate level introduction to three powerful and closely related techniques in condensed matter physics memory functions projection operators and the defect technique Memory functions appear in the formalism of the generalized master equations that express the time evolution of probabilities via equations non local in time projection operators allow the extraction of parts of quantities such as the diagonal parts of density matrices in statistical mechanics and the defect technique allows solution of transport equations in which the translational invariance is broken in small regions such as when crystals are doped with impurities These three methods combined form an immensely useful toolkit for investigations in such disparate areas of physics as excitation in molecular crystals sensitized luminescence charge transport non equilibrium statistical physics vibrational relaxation granular materials NMR and even theoretical ecology This book explains the three techniques and their interrelated nature along with plenty of illustrative examples Graduate students beginning to embark on a research project in condensed matter physics will find this book to be a most fruitful source of theoretical training

Dielectric Relaxation in Biological Systems Valerica Raicu, Yuri Feldman, 2015 This book covers the theoretical basis and practical aspects of the study of dielectric properties of biological systems such as water electrolyte and polyelectrolytes solutions of biological macromolecules cells suspensions and cellular systems

*Proceedings of the National Institute of Sciences of India* National Institute of Sciences of India, 1955 Statistical Mechanics Richard E. Wilde, Surjit Singh, 1998 A valuable learning tool for students and an indispensable resource for professional scientists and engineers Several outstanding features make this book a superior introduction to modern statistical mechanics It is the only intermediate level text offering comprehensive coverage of both basic statistical

mechanics and modern topics such as molecular dynamic methods renormalization theory chaos polymer chain folding oscillating chemical reactions and cellular automata It is also the only text written at this level to address both equilibrium and nonequilibrium statistical mechanics Finally students and professionals alike will appreciate such aids to comprehension as detailed derivations for most equations more than 100 chapter end exercises and 15 computer programs written in FORTRAN that illustrate many of the concepts covered in the text Statistical Mechanics begins with a refresher course in the essentials of modern statistical mechanics which on its own can serve as a handy pocket guide to basic definitions and formulas Part II is devoted to equilibrium statistical mechanics Readers will find in depth coverage of phase transitions critical phenomena liquids molecular dynamics Monte Carlo techniques polymers and more Part III focuses on nonequilibrium statistical mechanics and progresses in a logical manner from near equilibrium systems for which linear responses can be used to far from equilibrium systems requiring nonlinear differential equations
