and virtual experimentation The SOCR philosophy is that in science education one size does not fit all The handbook provides many examples of tools data materials and infrastructure for technology enhanced science education However it s ultimately the instructor s responsibility to wrap these resources into a coherent set of materials appropriate for their concrete classes student s maturity and course syllabi

Doing Statistical Analysis Christer Thrane,2022-07-29 Doing Statistical Analysis looks at three kinds of statistical research questions descriptive associational and inferential and shows students how to conduct statistical analyses and interpret the results Keeping equations to a minimum it uses a conversational style and relatable examples such as football COVID 19 and tourism to aid understanding Each chapter contains practice exercises and a section showing students how to reproduce the statistical results in the book using Stata and SPSS Digital supplements consist of data sets in Stata SPSS and Excel and a test bank for instructors Its accessible approach means this is the ideal textbook for undergraduate students across the social and behavioral sciences needing to build their confidence with statistical analysis

Evaluation of HSDPA and LTE Markus Rupp,Sebastian Caban,Christian Mehlführer,Martin Wrulich,2011-11-09 This book explains how the performance of modern cellular wireless networks can be evaluated by measurements and simulations With the roll out of LTE high data throughput is promised to be available to cellular users In case you have ever wondered how high this throughput really is this book is the right read for you At first it presents results from experimental research and simulations of the physical layer of HSDPA WiMAX and LTE Next it explains in detail how measurements on such systems need to be performed in order to achieve reproducible and repeatable results The book further addresses how wireless links can be evaluated by means of standard compliant link level simulation The major challenge in this context is their complexity when investigating complete wireless cellular networks Consequently it is shown how system level simulators with a higher abstraction level can be designed such that their results still match link level simulations Exemplarily the book finally presents optimizations of wireless systems over several cells This book Explains how the performance of modern cellular wireless networks can be evaluated by measurements and simulations Discusses the concept of testbeds highlighting the challenges and expectations when building them Explains measurement techniques including the evaluation of the measurement quality by statistical inference techniques Presents throughput results for HSDPA WiMAX and LTE Demonstrates simulators at both link level and system level Provides system level and link level simulators for WiMAX and LTE on an accompanying website https://www.nt.tuwien.ac.at/downloads/featured_downloads This book is an insightful guide for researchers and engineers working in the field of mobile radio communication as well as network planning Advanced students studying related courses will also find the book interesting
