The Librarian's Introduction to

Programming Languages Beth Thomsett-Scott, 2016-06-21 The Librarian's Introduction to Programming Languages presents case studies and practical applications for using the top programming languages in library and information settings. While there are books and Web sites devoted to teaching programming, there are few works that address multiple programming languages or address the specific reasons why programming is a critical area of learning for library and information science professionals. There are many books on programming languages, but no recent items directly written for librarians that span a variety of programs. Many practicing librarians see programming as something for IT people or beyond their capabilities. This book will help these librarians to feel comfortable discussing programming with others by providing an understanding of when the language might be useful, what is needed to make it work, and relevant tools to extend its application. Additionally, the inclusion of practical examples lets readers try a small app for the language. This also will assist readers who want to learn a language but are unsure of which language would be the best fit for them in terms of learning curve and application. Languages covered are JavaScript, PERL, PHP, SQL, Python, Ruby, C, C++, Java. This book is designed to provide a basic working knowledge of each language, presented case studies which show the programming language used in real ways, and resources for exploring each language in more detail. C Programming Absolute Beginner's Guide, Third Edition Gregory Rolan Perry, Dean Miller, 2013 Updated for C11 Write powerful C programs without becoming a technical expert. Understand the parts of a C program and how they fit together. Generate output and display it on the screen. Interact with users and respond to their input. Make the most of variables by using assignments and expressions. Control programs by testing data and using logical operators. Save time and effort by using loops and other techniques. Build powerful data entry routines with simple built-in functions. Manipulate text with strings. Store information so it's easy to access and use.
