Automatic Control with Experiments Victor Manuel Hernández-Guzmán,Ramón Silva-Ortigoza,2018-09-28 This textbook presents theory and practice in the context of automatic control education It presents the relevant theory in the first eight chapters applying them later on to the control of several real plants Each plant is studied following a uniform procedure a the plant s function is described b a mathematical model is obtained c plant construction is explained in such a way that the reader can build his or her own plant to conduct experiments d experiments are conducted to determine the plant s parameters e a controller is designed using the theory discussed in the first eight

chapters of practical controller implementation is performed in such a way that the reader can build the controller in practice and the experimental results are presented. Moreover, the book provides a wealth of exercises and appendices reviewing the foundations of several concepts and techniques in automatic control. The control system construction proposed is based on inexpensive, easy-to-use hardware. An explicit procedure for obtaining formulas for the oscillation condition and the oscillation frequency of electronic oscillator circuits is demonstrated as well.

Books in Print, 1977 Engineering Mathematics with Maple John S. Robertson, 1996. This book is intended for use as a supplemental tool for courses in engineering mathematics, applied ordinary and partial differential equations, vector analysis, applied complex analysis, and other advanced courses in which MAPLE is used. Each chapter has been written so that the material it contains may be covered in a typical laboratory session of about 1 1/2 to 2 hours. The goals for every laboratory are stated at the beginning of the chapter. Mathematical concepts are then discussed within a framework of abundant engineering applications and problem-solving techniques using MAPLE. Each chapter is also followed by a set of exploratory exercises that are intended to serve as a starting point for a student's mathematical experimentation. Since most of the exercises can be solved in more than one way, there is no answer key for either students or professors.
