Modern Biology Albert Towle,1989

The Fungal Spore and Disease Initiation in Plants and Animals G.T. Cole,H.C. Hoch,1991-02-28 This treatise is focused on early aspects of fungal pathogenesis in plant and animal hosts Our aim in choosing the topics and contributors was to demonstrate common approaches to studies of fungal plant and fungal animal interactions particularly at the biochemical and molecular levels For example the initial events of adhesion of fungal spores to the exposed surface tissues of the host are essential for subsequent invasion of the plant or animal and establishment of pathogenesis A point of consensus among investigators who have directed their attention to such events in plants insects and vertebrates is that spore adhesion to the host cuticle or epithelium is more than a simple binding event It is a complex and potentially pivotal process in fungal plant interactions which may involve the secretion of fluids that prepare the infection court for the development of morphological stages of the germling and subsequent invasion of the host Nicholson and Epstein Chapter 1 The attachment of the fungal propagule to the arthropod cuticle is also mediated by the chemical components present on the outer layer of the spore wall and the epicuticle Initial attachment may be reinforced further by either the active secretion of adhesive materials or the modification of spore wall material located at the fungal spore arthropod cuticle interface Boucias and Pendland Chapter 5
