Significance Reliability Confidence These and other such terms can be a mantra for both suppliers and buyers of data and

analytics Whether it be big data qualitative research or something in between sampling statistics and findings are often the drivers of customer or business analytic exercises But what about relevance If the results cannot direct business decisions what does it matter how accurate they are Used correctly such analytics are an enormously powerful driver of business performance and profitability But only if the findings have business salience or business significance Otherwise aren't they just another type of BS In this book Mike and Alex Sherman lay out some wonderful examples of how the time and money spent on business analytics can transform decision making or be a complete waste of time It contains great lessons for buyers and users of such services But I would also commend it to consultants and suppliers We shouldn't need to sell what a computer can do with data We should be promoting what humans and businesses can do by asking the right questions of the results Adrian Chedore Former CEO of Synovate This book thoughtfully and practically reminds us that as we continue to further automate consumer insight analytics efforts with the newest analytics and AI technology human thinking and human understanding of the fundamental purpose of the analysis and of the questions that are essential to understanding that purpose becomes even more important Professor Steven Miller Vice Provost Research Singapore Management University
