

Data Analysis interview questions and answers related to data visualization

Q How do you decide which type of chart or graph to use for a given dataset?

The type of chart or graph chosen depends on the nature of the data and the message you want to convey. For instance, bar charts are great for comparing quantities, while line graphs work well for showing trends over time. Pie charts can be used for displaying parts of a whole, but they can be less effective if there are too many categories.

A Candidates should explain the importance of understanding the audience and the data's story. They might mention that for more complex datasets, combination charts or interactive dashboards might be more effective to provide deeper insights.

Look for candidates who can articulate their thought process and provide examples of how they've chosen visualizations in the past. This shows their practical understanding and experience.
