**2016-2017** United Nations. Economic Commission for Europe. Inland Transport Committee,2017 During recent decades  
governments all around the world were faced with a complicated set of options for investing in transport including transport  
infrastructure This publication examines main principles for determining the most appropriate models for financing transport  
infrastructure expenditures but also illustrates and analyses many innovative ways to finance transport infrastructure  
Financing in this context means the provision of money at the time and in the quantity that is needed to meet society s  
transport infrastructure and transport service provision needs Thus financing is a basic underpinning of the entire process of  
providing and operating transport infrastructure Accepting the view that transport infrastructure is needed to provide a well  
defined set of public services at the highest level financing the transport sector including transport infrastructure  
expenditures is fundamentally a sovereign task which involves determining how much of the government s available public  
resources will be channelled into the transport infrastructure during a given period as opposed to other policy priorities  
However this report proves that this is not the case anymore There are many other innovative ways from which transport  
infrastructure construction could be funded other than the government s available public resources
