Bryant,John

Edwards, R. Scott Tindale, Emil J. Posavac, Linda Heath, Aaron Henderson-King, Yolanda Suarez-Balcazar, 2013-11-11 Many authors have argued that applying social psychology to the solution of real world problems builds better theories Observers have claimed for example that of human behavior applied social psychology reveals more accurate principles because its data are based on people in real life circumstances Helmreich 1975 Saxe Leventhal 1980 and discloses important gaps in existing theories Fisher 1982 Mayo LaFrance 1980 Undoubtedly many concrete examples can be mustered in support of these claims But it also can be argued that applying social psychology to social issues and problems builds better research methods Special methodological problems arise and new perspectives on old methodological problems emerge when researchers leave the laboratory and tackle social problems in real world settings Along the way we not only improve existing research techniques but also develop new research tools all of which enhance our ability to obtain valid results and thereby to understand and solve socially relevant problems Indeed Campbell and Stanley's 1966 seminal work on validity in research design grew out of the application of social science in field settings In this spirit the principal aim of this volume is to present examples of methodological advances being made as researchers apply social psychology in real life settings

Collaborative Dialogue Technologies in Distance Learning M. Felisa Verdejo, Stefano A. Cerri, 2012-12-06 In April 1993 an interdisciplinary NATO Advanced Research Workshop on Collaborative dialogue technologies in distance learning was held in Segovia Spain The workshop brought together researchers in fields related to distance learning using computer mediated communication The statement of justification of the NATO ARW follows hereafter Justification of the NATO Advanced Research Workshop on Collaborative Dialogue Technologies in Distance Learning Computer Mediated Communication CMC systems have features that reduce some temporal physical and social constraints on communication Theories of communication have shifted from viewing communication as a linear transmission of messages by a sender to a receiver to viewing it as a social paradigm where individuals are actors in a network of interdependent relationships embedded in organizational and social structures Recent research focuses on models of information sharing to support not only the activities of individuals but also the problem solving activities of groups such as decision making planning or co writing This area of research is called Computer Supported Cooperative Work CSCW The Artificial Intelligence AI approach uses knowledge based systems to enhance and facilitate all these processes including the possibility of using natural language The traditional model of distance education places a strong emphasis on independent study supported by well developed learning materials This model can be characterized as one way media However the potential of CMC to provide better guidance to the student in Higher Distance Education has been quickly recognized for at least two kinds of activities information sharing and interaction
