1. Answer the below question for the given scenarios.

   "A forest fire has broken out in a remote area, posing a threat to human lives and wildlife. Emergency response teams have deployed a rescue agent to assist in the rescue operations. The rescue agent analyzes the sensor data to assess the severity of the fire, identify areas of high heat intensity, and locate trapped or stranded individuals. The thermal cameras on the rescue agent help detect human presence in areas affected by smoke or low visibility. By analyzing the thermal signatures, the agent can pinpoint the location of individuals, even in challenging conditions. Using GPS data and mapping algorithms, the rescue agent plans the safest and most efficient routes for rescue teams to reach affected areas."

   (i) Provide the complete problem formulation.
   (ii) Provide the PEAS description.
   (iii) Identify the various dimensions of the task environment with appropriate justification for each in no more than 30 words

2.

   Consider a 2-player WORD FORMATION game as in below diagram. The game board consists of colored letters (RED and BLUE) and an empty space [Tile shaded in gray – Empty Space/Tile]. The player 1 aims to form any one of the following words in the board "BUS" or VAN", to win. The player 2 aims to form any one of the following words in the board "CAT" or "DOG", for winning. Assume the player 1 starts the move from the below initial state. In the game, player1 and player 2 alternate their turn.   [3+2+4 = 9 Marks]

   The puzzle has two legal moves: which results in the swap of position of the tile with the empty location

the mechanism that relates chromosomes with the ef ciency of the entity they represent thus allowing that ef cient organism which is we adapted to the environment to reproduce more often than those which are not The evolutionary process takes place during the reproduction stage There exists a large number of reproductive mechanisms in Nature Most common ones are mutation that causes the chromosomes of offspring to be different to those of the parents and recombination that combines the chromosomes of the parents to produce the offspring Based upon the features above the three mentioned models of evolutionary c puting were independently and almost simultaneously developed **The Practical Handbook of Genetic Algorithms** Lance D.
