Ribosomes Structure, Function, and Dynamics Marina V. Rodnina, Wolfgang Wintermeyer, Rachel Green, 2011-12-10 The ribosome is a macromolecular machine that synthesizes proteins with a high degree of speed and accuracy Our present understanding of its structure function and dynamics is the result of six decades of research This book collects over 40 articles based on the talks presented at the 2010 Ribosome Meeting held in Orvieto Italy covering all facets of the structure and function of the ribosome New high resolution crystal structures of functional ribosome complexes and cryo EM structures of translating ribosomes are presented while partial reactions of translation are examined in structural and mechanistic detail featuring translocation as a most dynamic process Mechanisms of initiation both in bacterial and eukaryotic systems translation termination and novel details of the functions of the respective factors are described Structure and interactions of the nascent peptide within and emerging from the ribosomal peptide exit tunnel are addressed in several articles Structural and single molecule studies reveal a picture of the ribosome exhibiting the energy landscape of a processive Brownian machine The collection provides up to date reviews which will serve as a source of essential information for years to come

Molecular and Cellular Biology of the Yeast Saccharomyces: Genome dynamics, protein synthesis, and energetics

James R. Broach, John R. Pringle, Elizabeth W. Jones, 1991 The burgeoning appreciation of yeasts as model systems for the study of fundamental cellular processes has highlighted the need for an update of the seminal 1981 monograph *The Molecular Biology of the Yeast Saccharomyces*. This need is now met by the publication of a three volume series to serve as the authoritative sequel. The first volume focuses on the genome organization of the yeast *Saccharomyces* as well as protein translation and its regulation and energy metabolism. Subsequent volumes emphasize such topics as the cell cycle, secretion and transcription. Together these volumes provide a comprehensive survey of the molecular and cellular biology of *Saccharomyces* and *Schizosaccharomyces* serving not only as a current summary of every significant area of investigation but also as a thorough reference source. These volumes are required reading for every one in the field and anyone curious about the state of the art of molecular and cellular biology.

Peterson's Guide to Graduate Programs in the Biological Sciences 1997 Peterson's, 1997-01-05 Graduate students depend on this series and ask for it by name. Why? The new editions of this six volume set contain the most comprehensive information available on more than 1,500 colleges offering over 31,000 master's, doctoral and professional degree programs in more than 350 disciplines. New for 1997: Non degree granting research centers, institutes and training programs that are part of a graduate degree program. Five discipline specific volumes detail entrance and program requirements, deadlines, costs, contacts and special options such as distance learning for each program if available. Each Guide features The Graduate Adviser which discusses entrance exams, financial aid, accreditation and more. The only source that covers nearly 4,000 programs in such areas as oncology, conservation biology, pharmacology and zoology.

Seven main classes of biopolymers are distinguished according to their chemical structures. This encyclopedia provides a throughout overview of the occurrence and metabolism of biopolymers. In addition, processes for biotechnological production, isolation from organisms and modification, material properties and technical applications in various areas such as for example in daily life products, medicine, pharmacy, food industry, agriculture, textiles, chemical industry and packaging industry are provided. The future perspectives of biopolymers are outlined. Volumes 7 and 8 focus on polyamides and complex proteinaceous materials synthesized by bacteria and eukaryotic organisms. All aspects of the biosynthesis and metabolism of these biopolymers as well as the production and isolation are described. Topics included are Poly- γ -D-glutamate, Cyanophycin, modifications of proteins, Sweet tasting proteins, Motor proteins, Enzymes for technical applications, Self assembling proteins, Cell membranes, Feathers, Silk proteins, Adhesive proteins, Protein composites, Wool, Collagens and gelatines.
