## Gcse New Macs:

**How Good an Historian Shall I Be?** Marnie Hughes-Warrington, 2012-02-28 R G Collingwood's name is familiar to historians and history educators around the world. Few however have charted the depths of his reflections on what it means to be educated in history. In this book Marnie Hughes Warrington begins with the facet of Collingwood's work best known to teachers re-enactment and locates it in historically informed discussions on empathy, imagination and history education. Revealed are dynamic concepts of the a priori imagination and education that tend towards reflection on the presuppositions that shape our own and others forms of life.

**Achieving a in Gcse Aqa English Specif** Paul Burns, P. Burns, 2006-05 A revision guide for the AQA English specification aimed at the more advanced student looking to boost his/her grade to A. As well as the normal revision material it explores advanced skills and techniques necessary to reach the very top.

**Secondary Education Journal**, 1986 Empathy and History Tyson Retz, 2018-07-27 Empathy and History offers a comprehensive and dual account of empathy's intellectual and educational history. Beginning in an influential educational movement that implanted the concept in R G Collingwood's re-enactment doctrine, the book goes back to reveal the fundamental role that empathy played in the foundation of the history discipline, before tracing its reception and development in twentieth-century hermeneutics and philosophy of history. Attentive to matters of practice, it illuminates the distinct character of the historical context that empathetic understanding seeks to capture and sets out a new approach to empathy as a special variety of historical questioning.

*Teaching and Using ICT in Secondary Schools* Terry Russell, 2013-12-16 The coverage of this book will provide an ideal text for use during departmental meetings for all curriculum subjects where ICT is an issue. It can also be used as a reference text for school-based mentors taking part in the teacher training process. As well as discussing the effective teaching of ICT as a curriculum subject, the author uses sample case studies to illustrate the wider role at Key Stages 3 and 4 for GCSE and for post-16 in the form of VCE. He also advises on the teacher training process, the primary-secondary transfer issues related to interface design, hardware and software provision and the assessment, recording and reporting of ICT capability. This book will appeal to a wide range of target readerships: trainees taking PGCE courses to become specialist ICT teachers, as well as other PGCE trainees as they all have to meet statutory ICT standards; practicing secondary teachers, whether specialists in ICT or other subjects who need to use ICT in their teaching; and secondary mentors with ICT as a major part of their responsibility.

Leone Burton, 2003-02-28 This contributed volume explores equity and social justice within the

field of mathematics education In part one Helga Jungwirth s introductory chapter provides a strong theoretical overview that is based in actual classroom behaviors and a typology that classifies the various interpretations found within this volume Also in part one Laurie Hart discusses developments in equity research in the United States Part two focuses on results of studies about social justice and their impact on learning in mathematics classrooms in various parts of the world For example in a chapter on Peru social justice does not just encompass gender but also inequalities in opportunities to learn such as problems of resources living and social conditions communal demands and language needs And part three focuses on computers as a resource to mathematics teaching The contributors raise several important social justice issues which have previously remained unresearched Although there are a number of chapters specifically dealing with gender many of the authors use one of the following strategies their gender specific questions are set in a wider socio cultural context they challenge what have threatened to become false orthodoxies or they raise other important issues These other issues include the meaning of democratic citizenship for mathematics classrooms the links between parents and children learning mathematics and the preconceptions of some teachers of underprivileged students in Australia Other chapters explore different forms of classroom communication participation and assessment The pieces on computers state that there is still not enough research to conclude whether computers in the mathematics classrooms are supportive of or detrimental to the learning of all students The one thing on which every author in this volume does agree is that social justice in mathematics education has still not been attained but that we must strive toward it to improve educational practices and society in general
