

If a forklift is used, approach the reel from the flange side. Position the forks such that the reel is lifted by both reel flanges. Do not allow the lift forks to contact the conductor. Care must be taken by the forklift operator not to make sudden turns or stops.

Conductor shipped on pallets should be stored indoors if possible. Conductor shipped on wooden or metal reels may be stored outdoors. When selecting a storage site, consideration should be given to:

- Traffic patterns during off-loading
- Grade and condition of the soil or pavement
- Protection from vehicle damage during the time in storage
- Environmental conditions such as exposure to heat, corrosive chemicals, etc.

Conductor reels should be stored on hard surfaces resting on the flange's edge (flanges vertical). Align reels flange to flange and, if possible, arrange so that first in is first out. Multiple wooden reels stacked on top of each other ("Pancake" storage) or storing reels flat (flanges horizontal) is not recommended for transmission size bare conductor. The weight of the stack can get extremely heavy, creating an enormous load on the bottom reel. Also, damage to the reel and/or conductor will likely occur when the reel is flipped for transit. A concentration of stress on the reel flange may cause it to break and subsequently damage the conductor.

If wooden cable reels must be pancaked or stored in vertical racks, do not lift the reel by the top flange. Spacers placed under the bottom flange and between reels (two 2x4s placed wide side up) create a space to insert the forks and lift the reel without damaging the conductor. If nails are used to secure the spacers, make sure the nails do not go through the flange and into the conductor. Prysmian does not recommend stacking wooden reels with flanges greater than 50" in diameter. Steel reels should never be stored or transported on their sides.

For extended storage of bare or insulated conductor (spare cable, etc.), reels should be stored cradled between railroad ties, power poles or crossarms. Size and spacing of the supports should raise the flange above the ground.

This helps keep the flanges from decaying and prevents the reels from rolling. At temporary storage sites where soil may be soft, preservative-treated plywood sheets may be used to keep reel flanges from sinking into the ground.

The emphasis in any bare conductor installation should be placed on avoiding damage to the conductor surface. The conductor should not be dragged across the bare ground, over rocks, fences or guard structures. Overhead conductor should never be rewound from the original shipping reel to another reel in the field.

The minimum allowable bend radius is 12 times the conductor overall diameter.
