

Failure Rate and Event Data for use within Risk Assessments (28/06/2012)

Introduction

1. HID C15 has an established set of failure rates that have been in use for several years. This document details those items and their failure rates. For items not within this set, or for which no values are currently available the inspector carrying out the assessment should estimate failure rates after discussions with Topic Specialists. The failure rates quoted within this document were derived and are intended for use on Land Use Planning cases. They were **NOT** originally intended for use in COMAH Safety Report Assessment because they do not necessarily take account of all factors that could be relevant and significant at particular installations. However, in the absence of site specific data, the values given here may serve as a starting point for safety reports.
2. Figure 1 shows the different types of information that are available in this document. For the full structure, see Figure 2. This introductory section also outlines a framework used in HID C15 to keep references pertaining to failure rates and a system for recording the use of non-generic failure rates used in particular cases.

Figure 1 Information covered in Chapter 6K

3. The first section covers failure rates. HID C15 currently has established failure rates or has some information for most of the items. The items on the diagram in Figure 2 contain a failure rate value(s) and a brief derivation. For rates that have ranges the derivation also contains a brief guide on what factors may affect the value.
4. The second section (see page 80) contains information on event data. The derivation of the rates to be used and how to use them are described.

Safety Culture and Leading Indicators for Safety in the Maritime and Offshore

Environment Alexander Olsen, 2024-06-15 This book provides guidance and insight into the development process for safety indicators to comply with general classification rule requirements. The utilisation of this guidance will provide tangible benefits as the marine and offshore industry is able to realise the positive results of tangible safety indicators that are developed correctly and managed appropriately throughout the lifecycle of the vessel or platform. In the marine and offshore industry design and equipment configurations vary from one system to the next and systems are in many cases increasingly complex. There are gaps in codes and standards which may lag technological innovations and there are issues related to interfaces between systems. Safety indicators such as risk analyses, FMEA, job safety analyses, management of change procedures, HSQE technical manuals and reliability based maintenance provide a formalised approach to identify hazardous situations, address the gaps and interconnection variances and improve safety, environmental performance and operational downtime. The majority of Classification Societies Class require their clients to develop and submit safety indicators as part of the classification requirements for certain systems and to obtain certain special notations.

Sustainable Liquefied

Natural Gas David A. Wood, Jianchao Cai, 2024-01-29 Sustainable Liquefied Natural Gas, the latest release in The Fundamentals and Sustainable Advances in Natural Gas Science and Engineering series, delivers many of the technical fundamentals needed in the natural gas industry with an additional sustainability lens. Introductory topics include liquefaction and separation technology. Advanced applications include improving operational efficiency for carriers and cargo shipping schedules, exploiting cold energy for regasification operations and an outlook on ways to further reduce emissions. Supported by corporate and academic contributors along with two well distinguished editors, Sustainable Liquefied Natural Gas provides today's natural gas engineers the knowledge to adjust liquefied natural gas operations in a more environmentally sustainable way. Provides case studies and visuals to illustrate how new principles can be applied in practical situations. Presents innovative advances that are leading to improved environmental performance. Bridges theory and applications with methods and examples from worldwide contributors in academia and industry.

Reliability and Risk

Assessment John D. Andrews, T. R. Moss, 2002 Risk assessment and risk analysis are now firmly fixed in the engineer's lexicon. Every engineering project, contract, piece of equipment and design requires this discipline by law. Reliability is the other key element in the mix for smooth running engineering projects and operations. In the modern industrial era economic factors have resulted in the construction and operation of larger and more complex process plants. Accidents at these types of plants have led to notorious incidents such as Flixborough, Bhopal, Chernobyl and Piper Alpha. Engineers are working to maximize the benefits of modern processing technology while reducing the safety risks to acceptable levels. However, each processing plant has unique problems and each must be individually assessed to identify, evaluate and control associated hazards. The first edition of Reliability and Risk Assessment was ahead of its time. The world has caught up with Andrews and

Moss and this fully revised second edition takes the analysis further and brings a more practical slant with greater and extensive use of case studies Reliability and Risk Assessment is for professional engineers but will also prove invaluable for postgraduate students involved in reliability and risk assessment research KEY FEATURES Rigorous mathematical descriptions of the most important techniques particularly fault tree analysis and Markov methods Practical examples of the application of these techniques to real life problems Self contained chapters detail methods of reliability and risk assessment Worked examples clarify the text and highlight salient points Three new detailed case studies include FMECA for a gas turbine system in service inspection of structural components and a business interruption risk analysis *Energy Research Abstracts* ,1985 Oconee Probabilistic Risk Assessment Project Plan ,1980 **Proceedings of the U.S. Nuclear Regulatory Commission Tenth Water Reactor Safety Research Information Meeting, Held at National Bureau of Standards, Gaithersburg, Maryland, October 12-15, 1982: Risk analysis, EPRI safety research program** ,1983 Proceedings of the U.S. Nuclear Regulatory Commission Tenth Water Reactor Safety Research Information Meeting ,1983 Encyclopedia of Quantitative Risk Analysis and Assessment: R-Z Edward L.
