**Coding Places** Yuri Takhteyev,2012-09-21 An examination of software practice in Brazil that reveals both the globalization and the localization of software development Software development would seem to be a quintessential example of today s Internet enabled knowledge work a global profession not bound by the constraints of geography In Coding Places Yuri Takhteyev looks at the work of software developers who inhabit two contexts a geographical area in this case greater Rio de Janeiro and a world of practice a global system of activities linked by shared meanings and joint practice The work of the Brazilian developers Takhteyev discovers reveals a paradox of the world of software it is both diffuse and sharply centralized The world of software revolves around a handful of places in particular the San Francisco Bay area that exercise substantial control over both the material and cultural elements of software production Takhteyev shows how in this context Brazilian software developers work to find their place in the world of software and to bring its benefits to their city Takhteyev s study closely examines Lua an open source programming language developed in Rio but used in such internationally popular products as World of Warcraft and Angry Birds He shows that Lua had to be separated from its local origins on the periphery in order to achieve success abroad The developers Portuguese speakers used English in much of their work on Lua By bringing to light the work that peripheral practitioners must do to give software its seeming universality Takhteyev offers a revealing perspective on the not so flat world of globalization
