Face Recognition Technologies Douglas Yeung, Rebecca Balebako, Carlos Ignacio Gutierrez Gaviria, Michael Chaykowsky, 2020-05-15 Face recognition technologies FRTs have many practical security related purposes but advocacy groups and individuals have expressed apprehensions about their use This report highlights the high level privacy and bias implications of FRT systems The authors propose a heuristic with two dimensions consent status and comparison type to help determine a proposed FRT s level of privacy and accuracy They also identify privacy and bias concerns

FINGER PRINT ACCESS CONTROL AND ATTENDANCE SYSTEM HANY NASYR (TP014606), Biometrics Fingerprint Attendance Management Troy Williams, 2023-05-14 Biometric fingerprint technology has revolutionized how many companies approach attendance management By using biometric technology a company can significantly maximize efficiency and reduce costs by eliminating the need to manage employee attendance manually Biometric technology also ensures accurate records and reduces the possibility of time abuse or fraud in the workplace Not only does it streamline the process but it also offers employers the ability to increase security for their employees and their workplace With this kind of technology employers now have an easier way to track attendance data and employees can feel more secure knowing their identity is protected from any potential misuse of their data This new approach to attendance management has allowed many companies to drastically save on costs associated with manual control while still ensuring accurate records are kept and a secure environment is maintained in the office

*Recent Advances in Face Recognition* Kresimir Delac, Mislav Grgic, Sonja Grgic, 2008-12-01 The main idea and the driver of further research in the area of face recognition are security applications and human computer interaction Face recognition represents an intuitive and non intrusive method of recognizing people and this is why it became one of three identification methods used in e passports and a biometric of choice for many other security applications This goal of this book is to provide the reader with the most up to date research performed in automatic face recognition The chapters presented use innovative approaches to deal with a wide variety of unsolved issues

**Touchless Palmprint Recognition Systems** Angelo Genovese, Vincenzo Piuri, Fabio Scotti, 2014-09-15 This book examines the context motivation and current status of biometric systems based on the palmprint with a specific focus on touchless and less constrained systems It covers new

technologies in this rapidly evolving field and is one of the first comprehensive books on palmprint recognition systems It discusses the research literature and the most relevant industrial applications of palmprint biometrics including the low cost solutions based on webcams The steps of biometric recognition are described in detail including acquisition setups algorithms and evaluation procedures Constraints and limitations of current palmprint recognition systems are analyzed and discussed The authors also introduce innovative methods for touchless and less constrained palmprint recognition with the aim to make palmprint biometrics easier to use in practical daily life applications and overcome the typical constraints and limitations described Touchless Palmprint Recognition Systems targets professionals and researchers working in biometrics image processing and three dimensional reconstruction Advanced level students studying biometrics and computer science will also find this material valuable as a secondary text book or reference **Our Biometric Future** Kelly Gates,2011-01-23

Since the 1960s a significant effort has been underway to program computers to see the human face to develop automated systems for identifying faces and distinguishing them from one another commonly known as Facial Recognition Technology While computer scientists are developing FRT in order to design more intelligent and interactive machines businesses and states agencies view the technology as uniquely suited for smart surveillance systems that automate the labor of monitoring in order to increase their efficacy and spread their reach Tracking this technological pursuit Our Biometric Future identifies FRT as a prime example of the failed technocratic approach to governance where new technologies are pursued as shortsighted solutions to complex social problems Culling news stories press releases policy statements PR kits and other materials Kelly Gates provides evidence that instead of providing more security for more people the pursuit of FRT is being driven by the priorities of corporations law enforcement and state security agencies all convinced of the technology s necessity and unhindered by its complicated and potentially destructive social consequences By focusing on the politics of developing and deploying these technologies Our Biometric Future argues not for the inevitability of a particular technological future but for its profound contingency and contestability Face Detection and Recognition Asit Kumar Datta,Madhura Datta,Pradipta Kumar Banerjee,2015-08-26 Face detection and recognition are the nonintrusive biometrics of choice in many security applications Examples of their use include border control driver s license issuance law enforcement investigations and physical access control Face Detection and Recognition Theory and Practice elaborates on and explains the theory and practice of face detection and recognition systems currently in vogue The book begins with an introduction to the state of the art offering a general review of the available methods and an indication of future research using cognitive neurophysiology The text then Explores subspace methods for dimensionality reduction in face image processing statistical methods applied to face detection and intelligent face detection methods dominated by the use of artificial neural networks Covers face detection with colour and infrared face images face detection in real time face detection and recognition using set estimation theory face recognition using evolutionary algorithms and face recognition in frequency domain Discusses

methods for the localization of face landmarks helpful in face recognition methods of generating synthetic face images using set estimation theory and databases of face images available for testing and training systems Features pictorial descriptions of every algorithm as well as downloadable source code in MATLAB PYTHON and hardware implementation strategies with code examples Demonstrates how frequency domain correlation techniques can be used supplying exhaustive test results Face Detection and Recognition Theory and Practice provides students researchers and practitioners with a single source for cutting edge information on the major approaches algorithms and technologies used in automated face detection and recognition

*Towards Unconstrained Face Recognition Using 3D Face Model* Zahid Riaz, M. Saquib Sarfraz, Michael Beetz, 2011

*Handbook of Remote Biometrics* Massimo Tistarelli, Stan Z. Li, Rama Chellappa, 2012-03-14 The development of technologies for the identification of individuals has driven the interest and curiosity of many people Spearheaded and inspired by the Bertillon coding system for the classification of humans based on physical measurements scientists and engineers have been trying to invent new devices and classification systems to capture the human identity from its body measurements One of the main limitations of the precursors of today's biometrics which is still present in the vast majority of the existing biometric systems has been the need to keep the device in close contact with the subject to capture the biometric measurements This clearly limits the applicability and convenience of biometric systems This book presents an important step in addressing this limitation by describing a number of methodologies to capture meaningful biometric information from a distance Most materials covered in this book have been presented at the International Summer School on Biometrics which is held every

year in Alghero Italy and which has become a flagship activity of the IAPR Technical Committee on Biometrics IAPR TC4 The last four chapters of the book are derived from some of the best presentations by the participating students of the school The educational value of this book is also highlighted by the number of proposed exercises and questions which will help the reader to better understand the proposed topics

*Computer Based Face Recognition Using Neural Networks* Usamah M. S. Altaf, 1996
