**Database Programming with JDBC and Java** George Reese,2000 Java and databases make a powerful combination Getting the two sides to work together however takes some effort largely because Java deals in objects while most databases do not This book describes the standard Java interfaces that make portable object oriented access to relational databases possible and offers a robust model for writing applications that are easy to maintain It introduces the JDBC and RMI packages and uses them to develop three tier applications applications divided into a user interface an object oriented logic component and an information store The book begins with a quick overview of SQL for developers who may be asked to handle a database for the first time It then explains how to issue database queries and updates through SQL and JDBC It also covers the use of stored procedures and other measures to improve efficiency where these are available But the book s key contribution is a set of patterns that let developers isolate critical tasks like object creation information storage and retrieval and the committing or aborting of transactions The second edition includes more basics of JDBC and SQL with more examples and a deeper discussion about the architecture of a robust maintainable database application The second edition also explains the relationship between JDBC and Enterprise JavaBeans

image features used in this chapter are grayscale, sharpening, inverting, blurring, dilation, erosion, closing, opening, vertical prewitt, horizontal prewitt, Laplacian, horizontal sobel, and vertical sobel. For readers, you can develop it to store other advanced image features based on descriptors such as SIFT and others for developing descriptor-based matching. In chapter eight, you will be taught to create a Java GUI to view, edit, insert, and delete Suspect table data. This table has eleven columns: suspect\_id (primary key), suspect\_name, birth\_date, case\_date, report\_date, suspect\_status, arrest\_date, mother\_name, address, telephone, and photo. In chapter nine, you will be taught to create a Java GUI to view, edit, insert, and delete Feature\_Extraction table data. This table has eight columns: feature\_id (primary key), suspect\_id (foreign key), feature1, feature2, feature3, feature4, feature5, and feature6. All six fields except keys will have a BLOB data type so that the image of the feature will be directly saved into this table. In chapter ten, you will add two tables: Police\_Station and Investigator. These two tables will later be joined to the Suspect table through another table, File\_Case, which will be built in the seventh chapter. The Police\_Station has six columns: police\_station\_id (primary key), location, city, province, telephone, and photo. The Investigator has eight columns: investigator\_id (primary key), investigator\_name, rank, birth\_date, gender, address, telephone, and photo. Here, you will design a Java GUI to display, edit, fill, and delete data in both tables. In chapter eleven, you will add two tables: Victim and Case\_File. The File\_Case table will connect four other tables: Suspect, Police\_Station, Investigator, and Victim. The Victim table has nine columns: victim\_id (primary key), victim\_name, crime\_type, birth\_date, crime\_date, gender, address, telephone, and photo. The Case\_File has seven columns: case\_file\_id (primary key), suspect\_id (foreign key), police\_station\_id (foreign key), investigator\_id (foreign key), victim\_id (foreign key), status, and description. Here, you will also design a Java GUI to display, edit, fill, and delete data in both tables. Finally, this book is hopefully useful and can improve database programming skills for every Java, MariaDB, and SQLite programmer.
