

4 - Solving the linear programming model:

There are two basic ways to solve the linear programming models:

(a) Graphical method: This method is used in the case of a specified number of variables (two or three only) but does not give us the practical way to solve linear programs because most of the problems of linear programming include a large number of variables.

This method is based on drawing these constraints from their two intersection points with the coordinate's axes, and then defining the common region between these constraints called the **Feasible Solutions Region (FSR)**. The angles of this region represent the **Extreme points** from which we obtain the optimal values for the two variables so that they achieve the objective function. This method is considered the basic method to reach the Simplex method.

Example 3:

Solve the following linear programming model:

$$\begin{aligned} \max . \quad & Z = 120X + 100Y \\ \text{s.t.} \quad & 2X + 2.5Y \leq 1000 \\ & 3X + 1.5Y \leq 1200 \\ & 1.5X + 4Y \leq 1200 \\ & X, Y \geq 0 \end{aligned}$$

Solution:

1.	$2X + 2.5Y = 100$	if	$X = 0$	then	$Y = 400$	\Rightarrow	$(0, 400)$	
			if	$Y = 0$	then	$X = 500$	\Rightarrow	$(500, 0)$
2.	$3X + 1.5Y = 1200$	if	$X = 0$	then	$Y = 800$	\Rightarrow	$(0, 800)$	
			if	$Y = 0$	then	$X = 400$	\Rightarrow	$(400, 0)$
3.	$1.5X + 4Y = 1200$	if	$X = 0$	then	$Y = 300$	\Rightarrow	$(0, 300)$	
			if	$Y = 0$	then	$X = 800$	\Rightarrow	$(800, 0)$
4.	$X = 0$							
5.	$Y = 0$

Integer Programming and Related Areas C. Kastning, 2013-11-11 Integer Programming is one of the most fascinating and difficult areas in the field of Mathematical Optimization Due to this fact notable research contributions to Integer Programming have been made in very different branches of mathematics and its applications Since these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field I initiated this compilation of literature in 1970 at the Institut für Konometrie und Operations Research University of Bonn Since then many collaborators have contributed to and worked on it Among them Dipl Math Claus Kastning has done the bulk of the work With great perseverance and diligence he has gathered all the material and checked it with the original sources The main aim was to incorporate rare and not easily accessible sources like Russian journals preprints or unpublished papers Without the invaluable and dedicated engagement of Claus Kastning the bibliography would never have reached this final version For this reason he must be considered its responsible editor As with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete We have however tried to be as complete as possible The bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries
