Design Structure Matrix Methods and Applications Steven D. Eppinger, Tyson R. Browning, 2012 Design structure matrix DSM is a straightforward and flexible modeling technique that can be used for designing developing and managing complex systems DSM offers network modeling tools that represent the elements of a system and their interactions thereby highlighting the system s architecture or designed structure Its advantages include compact format visual nature intuitive representation powerful analytical capacity and flexibility Used primarily so far in the area of engineering management DSM is increasingly being applied to complex issues in health care management financial systems public policy natural sciences and social systems This book offers a clear and concise explanation of DSM methods for practitioners and researchers [A Hetero-functional Graph Theory for Modeling Interdependent Smart City Infrastructure](#) Wester C. H. Schoonenberg, Inas S. Khayal, Amro M. Farid, 2018-11-30 Cities have always played a prominent role in the prosperity of civilization Indeed every great civilization we can think of is associated with the prominence of one or more thriving cities And so understanding cities their inhabitants their institutions their infrastructure what they are and how they work independently and together is of fundamental importance to our collective growth as a human civilization Furthermore the 21st century smart city as a result global climate change and large scale urbanization will emerge as a societal grand challenge This book focuses on the role of interdependent infrastructure systems in such smart cities especially as it relates to timely and poignant questions about resilience and sustainability In particular the goal of this book is to present in one volume a consistent Hetero Functional Graph Theoretic HFGT treatment of interdependent smart city infrastructures as an overarching application domain of engineering systems This work may be contrasted to the growing literature on multi layer networks which despite significant theoretical advances in recent years has modeling limitations that prevent their real world application to interdependent smart city infrastructures of arbitrary topology In contrast this book demonstrates that HFGT can be applied extensively to an arbitrary number of arbitrarily connected topologies of interdependent smart city infrastructures It also integrates for the first time all six matrices of HFGT in a single system adjacency matrix The book makes every effort to be accessible to a broad audience of infrastructure system practitioners and researchers e g electric power system planners transportation engineers and hydrologists etc Consequently the book has extensively visualized the graph theoretic concepts for greater intuition and clarity Nevertheless the book does require a common methodological base of its readers and directs itself to the Model Based Systems Engineering MBSE community and the Network Science Community NSC To the MBSE community we hope that HFGT will be accepted as a quantification of many of the structural concepts found in model based systems engineering languages like SysML To the NSC we hope to present a new view as how to construct graphs with fundamentally different meaning and insight Finally it is our hope that HFGT serves to overcome many of the theoretical and modeling limitations that have hindered our ability to systematically understand the structure and function of smart cities

Proceedings of the 6th International Conference on Axiomatic Design , *The On-line Electric Vehicle* Nam P. Suh, Dong Ho Cho, 2017-04-04 This book details the design and technology of the on line electric vehicle OLEV system and its enabling wireless power transfer technology the shaped magnetic field in resonance SMFIR The text shows how OLEV systems can achieve their three linked important goals reduction of CO2 produced by ground transportation improved energy efficiency of ground transportation and contribution to the amelioration or prevention of climate change and global warming SMFIR provides power to the OLEV by wireless transmission from underground cables using an alternating magnetic field and the reader learns how this is done This cable network will in future be part of any local smart grid for energy supply and use thereby exploiting local and renewable energy generation to further its aims In addition to the technical details involved with design and realization of a fleet of vehicles combined with extensive subsurface charging infrastructure practical issues such as those involved with pedestrian safety are considered Furthermore the benefits of reductions in harmful emissions without recourse to large banks of batteries are made apparent Importantly the use of Professor Suh s axiomatic design paradigm enables such a complicated transportation system to be developed at reasonable cost and delivered on time The book covers both the detailed design and the relevant systems engineering knowledge and draws on experience gained in the successful implementation of OLEV systems in four Korean cities The introduction to axiomatic design and the in depth discussion of system and technology development provided by *The On line Electric Vehicle* is instructive to graduate students in electrical mechanical and transportation engineering and will help engineers and designers to master the efficient timely and to cost implementation of large scale networked systems Managers responsible for the running of large transportation infrastructure projects and concerned with technology management more generally will also find much to interest them in this book
