Braha,O. Maimon,2013-04-17 Formal Design Theory PDT is a mathematical theory of design The main goal of PDT is to develop a domain independent core model of the design process The book focuses the reader s attention on the process by which ideas originate and are developed into workable products In developing PDT we have been striving toward what has been expressed by the distinguished scholar Simon 1969 that the science of design is possible and some day we will be able to talk in terms of well established theories and practices The book is divided into five interrelated parts The conceptual approach is presented first Part I followed by the theoretical foundations of PDT Part II and from which the algorithmic and pragmatic implications are deduced Part III Finally detailed case studies illustrate the theory and the methods of the design process Part IV and additional practical considerations are evaluated Part V The generic nature of the concepts theory and methods are validated by examples from a variety of disciplines FDT explores issues such as algebraic representation of design artifacts idealized design process cycle and computational analysis and measurement of design process complexity and quality FDT s axioms convey the assumptions of the theory about the nature of artifacts and potential modifications of the artifacts in achieving desired goals or functionality By being able to state these axioms explicitly it is possible to derive theorems and corollaries as

   Optimization by GRASP Mauricio G.C. Resende,Celso C. Ribeiro,2016-10-26 This is the first book to cover GRASP Greedy Randomized Adaptive Search Procedures a metaheuristic that has enjoyed wide success in practice with a broad range of applications to real world combinatorial optimization problems The state of the art coverage and carefully crafted pedagogical style lends this book highly accessible as an introductory text not only to GRASP but also to combinatorial optimization greedy algorithms local search and path relinking as well as to heuristics and metaheuristics in general The focus is on algorithmic and computational aspects of applied optimization with GRASP with emphasis given to the end user providing sufficient information on the broad spectrum of advances in applied optimization with GRASP For the more advanced reader chapters on hybridization with path relinking and parallel and continuous GRASP present these topics in a clear and concise fashion Additionally the book offers a very complete annotated bibliography of GRASP and combinatorial optimization For the practitioner who needs to solve combinatorial optimization problems the book provides a chapter with four case studies and implementable templates for all algorithms covered in the text This book with its excellent overview of GRASP will appeal to researchers and practitioners of combinatorial optimization who have a need to find optimal or near optimal solutions to hard combinatorial optimization problems   *41st Annual Symposium on Foundations of Computer Science* ,2000 Featuring 66 papers from the November 2000 conference in Redondo Beach California this volume presents recent and in some cases continuing research in the fields of computer science and mathematics Contributors tackle subjects like methods for extracting randomness fairness measures for resource allocation approximability graph isomorphism
